

# Graduation Pathway Options Report | Foreword

*If you would like copies of this report in an alternative format, please contact the State Board of Education Washington State Board of Education, 600 Washington Street SE., P.O. Box 47206, Olympia, WA 98504, Phone: 360.725.6025, TTY: 360.664.3631.*

*Final versions of this report will be available at [sbe.wa.gov/legislativereports](http://sbe.wa.gov/legislativereports).*

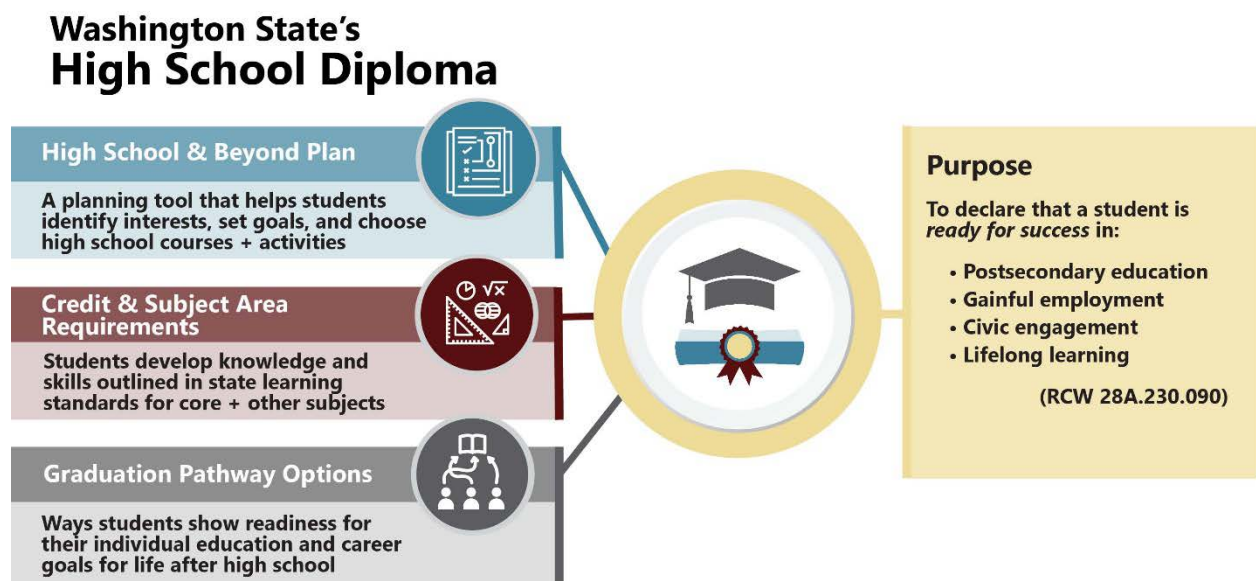

The Washington State  
**BOARD OF EDUCATION**

The graduation pathway is one of three required components for earning a high school diploma (see Figure below). Each component serves a different function. Together they fulfill the purpose of the diploma in declaring a student is ready for success in postsecondary education, gainful employment, civic engagement, and lifelong learning.

While students develop knowledge and skills across subject areas by completing the Credit & Subject Area Requirements (i.e., 24-credit framework), the graduation pathway options provide students multiple ways to show readiness for their individual education and career goals. In other words, what makes the graduation pathway requirement distinct from other requirements is the **focus on the student's individual goals**. The pathway a student completes must align with the student's postsecondary goals as described in their High School and Beyond Plan.

Graduation pathway options include tests and advanced courses in English language arts and math, Career and Technical Education course sequences, and the military vocational aptitude test (Armed Services Vocational Aptitude Battery).

In anticipation of potential barriers, the Legislature charged the State Board of Education with researching the first three years of pathways implementation to identify barriers and provide recommendations for changes to the existing pathways and additional pathways options. While implementation was disrupted by the COVID-19 pandemic, the research identified other challenges. The pathway options do not meet the needs of all students. In some cases, students complete pathways that do not match their individual goals, in which case the pathway is not serving its intended purpose. A strong, consistent theme we heard from students, families, and educators throughout three years of research is the need for more relevant, engaging, and authentic options, including options in subject areas beyond English and math, that can be customized to better align with students' individual goals.

### **Research questions:**

The research, conducted by Strobel Consulting over the past three addressed the following questions called out in the legislation:

- Whether changes to the existing eight pathways should be made and what those changes should be;
- The barriers schools and districts have to offering all of the graduation pathways and recommendations to eliminate or reduce those barriers for school districts;
- Whether all students have equitable access to all the graduation pathways and, if not, recommendations for reducing the barriers students may have to accessing all the graduation pathways; and
- Whether additional graduation pathways should be included and recommendations for what those pathways should be.

### **Findings over the three years of study:**

- The need for changes to the pathways was a recurrent theme across each year of the study. In the first year, respondents expressed less familiarity with the pathways and there was more uncertainty as to whether there should be changes or additions to the current graduation pathway options than in subsequent years. In Year 2, most respondents agreed that changes should be made to the current graduation pathway options, with a larger proportion of high school administrators and personnel than district personnel agreeing that changes should be made. In Year 3, about half of educators responding to the District Survey agreed that changes should be made (YR1, YR2, and YR3).
- The current graduation pathway options do not always align with students' post-graduation goals and need to be more relevant to what students want to do and achieve beyond high school. Stakeholders in each year of the study indicated that for many students the current pathway options do not provide a meaningful trajectory for organizing their learning in the context of their intended pursuits beyond high school (YR1, YR2, and YR3).
- In each year of the study, stakeholders reported there were barriers to offering all of the graduation pathway options. The most cited barriers included lack of resources, financial constraints/lack of funding, lack of certified teachers or staffing in general (YR1, YR2 and YR3).
- Respondents from districts/schools who reported they did not offer all the available graduation pathways suggested changes to address funding, staffing, and scheduling barriers would allow them to offer more pathway options (YR1, YR2 and YR3).

- Based on data from open ended survey items and focus group discussions in each year of the study, the area of greatest concern for stakeholders is the lack of equity for English learners (ELL's), students with a 504 plan, students receiving special education services, students experiencing homelessness, and other systemically marginalized populations when it comes to accessing a meaningful graduation pathway that aligns with their High School & Beyond Plan (YR1, YR2 and YR3).
- Results from open-ended survey items and feedback from focus group participants indicated that respondents believed the only graduation pathway option for students who do not test well, do not have strong reading or math skills, or are otherwise unable to meet one of the graduation pathway options involving a standardized assessment or other type of test, is the CTE sequence pathway. Therefore, it is highly inequitable if districts in the state do not have the ability to offer a CTE sequence that meets the pathway requirement. As of the 2020-21 school year, 19 percent of districts reported they are unable to offer a CTE sequence that meets pathway requirements (YR1, YR2 and YR3).
- The CTE pathway was another area that was consistently cited by survey respondents and focus group participants in each year of the study as being inequitable, especially for alternative and small to medium schools with fewer options for offering a variety of CTE courses, let alone a sequence, taught by certified teachers. The majority of educator respondents from districts that have a CTE sequence/s available did not feel that the sequence/s met the needs of all or most students or did not match their post high school plans. This implies that a large number of students in the state do not have access to a pathway that meets their needs and is relevant to their future goals (YR1, YR2 and YR3).
- Respondents noted in Year 1 that gainful employment, financial and domestic independence, and the desire to contribute to society in a meaningful way are worthy post-graduation goals and that a graduation pathway option specific to these types of goals should be available. Data collected during focus groups and on open-ended survey items in Years 2 and 3 further indicated that, regardless of students' post high school goals, there is a need for graduation pathway options to provide more opportunities for students to learn skills that prepare them for life and employability (YR1, YR2 and YR3).
- Respondents pointed out in Year 1 that the majority of current graduation pathway options address enrollment in some type of continuing education, or enlistment in a military branch, but lack options for students intending to enter the workforce immediately after school. Data collected during focus groups and on open-ended response survey items in Year 2 also indicated there is a lack of pathway options for students that intend to enter the trades or workforce directly after high school. In addition, students with these post high school goals lack opportunities for preparation and are largely unsupported by the graduation pathway options (YR1, YR2 and YR3).

## **Recommendations:**

The following suggestions for future development are intended as a jumping off point for continuing to monitor, improve and refine the WA Graduation Pathway Options to ensure that they are equitable, meaningful, and relevant to each and every student. These suggestions are based on the data and feedback collected from stakeholders across the three years of the study and represent potential data driven ways to build on the work that has been done thus far.

- Students should have pathway options that more accurately reflect Washington's Profile of a Graduate. Specifically, pathway options need to provide more opportunities for students to cultivate personal growth and knowledge, solve problems, communicate effectively, sustain wellness, embrace differences/diversity, and master life skills/self-agency. Satisfying the requirements of current graduation pathway options do not necessarily support the important goals of Profile of a Graduate.

*"My son is four-year college bound, but where are the hands-on experiences so he knows how to navigate life outside the classroom? I want him to have real world learning experiences in high school. He's smart and can pass all of the tests, but I worry when he gets to college, he won't know how to navigate the other important aspects of life." – Parent*

- Graduation pathways need to include options that are meaningful for students regardless of their post high school goals and dreams. Specifically, there is a great need for graduation pathway options that require opportunities to master the skills and attributes needed to succeed in the 21<sup>st</sup> century job market, regardless of whether job attainment occurs immediately after high school or during/after post-secondary education. Future work in this area also ensures the graduation pathway options are more aligned with the purpose of the diploma as defined in statute (RCW 28A.230.090) and the Profile of a Graduate.

*"Within the past two years, I've noticed people come to apply for a position lacking leadership skills and when asked how they would handle conflict resolution, they don't seem to know how to navigate through that. Conflict resolution can be a big deal!" - HR Manager, Walsh Construction*

*"10 percent of our students are going to be farmers and we don't recognize these things. There aren't pathways for them. They actually know what they want to do, and we can't support them." - Educator*

- Students should have pathway options that truly reflect their High School and Beyond Plan. This requires that the High School and Beyond Plan be a meaningful instrument that informs the supports students receive in planning their coursework; satisfying the requirements of their chosen graduation pathway; and ensuring they leave high school with the skills, knowledge, and experiences they need to achieve their post-graduation goals, regardless of what those are.

*"As a student, I wish that we worked backwards, where we asked students what they want to do and who they want to be and then built a pathway around that." – Student*

- Data collected during all three years of the study strongly indicate the need for additional graduation pathway options, especially pathways that are not assessment based. Specifically, graduation pathways should be added that positively impact both equity for districts/schools in their ability to offer all of the graduation pathway options and increase the likelihood that all students have access to pathways that are meaningful and supportive of their post-graduation goals. Future work on the incorporation, design, and parameters of additional pathways is needed and should be informed by stakeholders such as educators, parents/caregivers, industry professionals, other content experts, and most especially students.

*"I'm from a small district with only two CTE pathways and these are not meaningful to most of the students who are taking them, but it's their only option, so we're all complicit in making them take courses that mean nothing to them, because we want them to have that diploma." – Educator*

- Graduation pathway options and the parameters under which they are satisfied need to be more student driven and incorporate greater opportunities for mastery-based learning. This provides students the opportunity to apply their learning in real world settings, and demonstrate skill attainment and academic mastery in ways that truly reflect their learning experiences, inspire them to be lifelong learners, and honor their post-graduation goals.

*"Not every student has the luxury of missing classes for external learning opportunities, but I've learned absolutely nothing in school taking and passing my AP tests. The things I've learned that matter most to me have all come from the opportunities I have outside of school, in the real world." – Student*

*"We so rarely ask students what they want, what they need. We tell them what we think they need and should do, but that's not what prepares a student for life. It doesn't inspire them and it doesn't help them. We are failing students if we don't ask them what they need." – Educator*

*"No one knows what I want to do after I leave school. Maybe I don't even know, but it's not the pathways. I don't know how to get where I want and do what I'm supposed to at the same time." – Student*

Based on the research, and in response to the Legislature's charge, the Board recommends the following to improve the current system of graduation pathway options:

- Adding two options to the graduation pathways that school districts may offer: a performance-based pathway and a work-related pathway. These new options will allow students to show what they know and can do in real-world, hands-on ways that align with their individual goals for after high school. They allow students to focus their

pathway in two core subject areas (from list below) that most directly align with their education or career goals.

The performance-based and work-related options may take a variety of forms – such as a project, practicum, cultural activity, paid or unpaid work experience, community service, internship, apprenticeship or pre-apprenticeship – and may result in a variety of products that can be evaluated – such as a performance, presentation, portfolio, report, film, or exhibit. But, to count as a graduation pathway, the learning experience must meet state requirements regarding the safety and quality of the learning experience and the assessment criteria for determining the student has applied the learning standards. Evaluation of the student's performance must include at least one qualified teacher in each relevant subject area, and the school district must adopt a local policy that meets state requirements before offering the pathway option. The proposal also establishes ongoing data and monitoring requirements at the state and local levels.

In addition, the State Board is supporting efforts lead by the Office of the Superintendent of Public Instruction to:

- Improve the High School and Beyond Plan to better support students as they progress through the system. The SBE will continue to work toward equitable implementation of graduation pathways that permit authentic demonstration what students know and are able to do and are aligned to each individual student's High School and Beyond Plan.

## EXECUTIVE SUMMARY

Strobel Consulting collected District Survey, focus group and interview data during the third year of a three-year project. The data will inform the Washington State Board of Education's (SBE) understanding of stakeholder perceptions regarding the new high school diploma pathways (see page 34 for a description of the pathways). The analysis will continue to support the Board's required reporting to the education committees of the legislature required in RCW 28A.655.260 (subsections [2] and [3]). Specifically, the statute requires that the report address:

- 1) Whether changes to the existing eight pathways should be made and what those changes should be;
- 2) The barriers schools and districts have to offering all of the graduation pathways and recommendations to eliminate or reduce those barriers for school districts;
- 3) Whether all students have equitable access to all of the graduation pathways and, if not, recommendations for reducing the barriers students may have to accessing all of the graduation pathways; and
- 4) Whether additional graduation pathways should be included and recommendations for what those pathways should be.<sup>1</sup>

In addition to what the statute required the report address, the year 3 scope of work was expanded to include the following :

- a. How the High School and Beyond Plan is/was implemented in their school or district.
- b. What improvements could be made to the High School and Beyond Plan to make it a better tool for students to plan their future after high school.
- c. What improvements could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities.
- d. Relevancy of pathways, and how to make them more relevant.
- e. Alignment of pathways to Profile of a Graduate.

The three-year project was designed to gather both quantitative and qualitative data so as to provide the Washington State Board of Education with a comprehensive overview of feedback from key stakeholders. The year three (YR3) data gathered is intended to examine stakeholders' (district and school level personnel, students, parents/caregivers and community members) perceptions of the current graduation pathway options, including suggestions for changes, perceived barriers,

---

<sup>1</sup> These reporting requirements pertain to the final SBE report to the legislature due December 10, 2022. By addressing them all, this report provides more than enough information to address the requirements pertaining to the report due to the legislature by August 1, 2021.

equitable access, input on whether or not other pathway options should be added, perceptions of pathway options in the context of both the High School and Beyond Plan and the Profile of a Graduate. In addition, information obtained from findings in years one (YR1) and two (YR2) of the project informed the project design and areas of deeper focus examined in YR3, as well as the related instruments and protocols for YR3. Data gathered from all three years of the project have provided additional insight regarding potential strategies for addressing key findings and implementing related processes.

While the Executive Summary of this report focuses on findings from YR3 of the project, subsequent sections (Summary of Key Findings Years 1-3, Suggestions for Future Development, and Lessons Learned Years 1-3) include findings across all three years of the study.

**Please note, that the perceptions of some, or all, of the survey respondents may or may not accurately reflect current state or local policy. Potential discrepancies between the perceptions of respondents and current state or local policy does not make such findings inaccurate. Rather, these types of findings are crucial, because they highlight current challenges in communication, implementation and policy perception. If we want to truly understand the perspective of stakeholders, then their perception of the truth, or what is true for them, is a deeply meaningful finding, especially when it comes to the perception of students.**

The overarching findings of the YR3 analysis indicate that<sup>2</sup>:

- ◆ Changes should be made to the existing pathways in order to make them more equitable, more relevant to students and their High School and Beyond Plan (HSBP), and more reflective of Washington’s Profile of a Graduate. Areas of greatest concern include lack of equity for English learners (ELL’s), students with a 504 plan, students receiving special education services, students experiencing homelessness and other systemically marginalized populations, and inequity amongst small, rural and Alternative Learning Environment (ALE) schools that do not have the resources to offer many of the pathway options.
- ◆ The current graduation pathway options do not always align with students’ post-graduation goals and need to be more relevant to what students want to do and achieve beyond high school. Specifically, current pathway options do not provide students with a meaningful trajectory for organizing their learning around the context of their current passions, goals and dreams beyond high school.

---

<sup>2</sup> Please see the following section for a “Summary of Key Findings” and the “Key Findings” section for more in-depth information on the results of the study.

- ◆ The most common barriers to offering all of the graduation pathway options include lack of resources, financial constraints/lack of funding, and lack of certified teachers or staffing in general.
- ◆ Schools that do not offer all the available graduation pathways need changes to the existing graduation pathway options that address lack of funding, issues with staffing, and scheduling barriers, in order to offer more pathway options.
- ◆ The CTE sequence is the only graduation pathway option for students who do not test well, do not have strong reading or math skills, or are otherwise unable to meet one of the graduation pathway options involving a standardized assessment or other type of test and is often not in alignment with their HSBP or post high school goals. A meaningful pathway option that is reflective of post high school goals for students that do not test well needs to be added.
- ◆ The CTE pathway is inequitable, especially for alternative and small to medium schools with fewer options for offering a variety of CTE courses, let alone a sequence, taught by certified teachers. Oftentimes the CTE sequence/s small schools are able to make available do not meet the needs of all or most students and/or do not match their post high school plans. This is especially inequitable for students whose only graduation pathway option is the CTE pathway.
- ◆ The majority of current graduation pathway options address enrollment in some type of continuing education, or enlistment in a military branch, but lack options for students intending to enter the workforce immediately after school. In addition, students with these post high school goals lack opportunities for preparation and are largely unsupported by the graduation pathway options.
- ◆ Gainful employment, financial and domestic independence, and the desire to contribute to society in a meaningful way, are worthy post-graduation goals and a graduation pathway option specific to these types of goals should be made available. Regardless of students' post high school goals, there is a need for graduation pathway options that provide more opportunities for students to learn skills that prepare them for life and employability. There is a great need for pathways and graduation requirements that focus less on college readiness and more on real-world skills such as financial literacy, life skills, and employability.
- ◆ Graduation pathway options need to include more opportunities for student ownership and agency, where students can explore their interests, engage in their learning, and play an active role in determining what constitutes a meaningful graduation pathway for them.
- ◆ The highest rated pathways in terms of fulfilling the goals of the Profile of a Graduate are the CTE Sequence and Dual Credit Courses pathways. Specifically, these pathways allow students to develop or demonstrate cultivation of personal growth and knowledge, and problem solving skills moderately well to very well. However, the graduation pathway options overall are not reflective of the Profile of the Graduate, since they are not equitable for all students.

- ◆ For the High school and Beyond Plan (HSBP) to become a positive tool for helping students plan courses of study that support their post-graduation goals, additional direction from the state, including general implementation guidelines, identification of accountable personnel, associated timelines and other accountability requirements, are needed to ensure all students in the state are meeting this graduation requirement in a meaningful way, regardless of what school they attend.
- ◆ More information regarding the HSBP needs to be provided to students and parents early on in the high school career, so that there is an opportunity for students to really utilize the tool for its intended purpose rather than completing it as a, “check the box” activity senior year.
- ◆ The HSBP would be more likely to provide positive outcomes if it was a more individualized process in which students could work directly with advisors and parents to complete the tool in a thoughtful manner. Specifically, the HSBP might be more useful if it was completed as part of a separate class, or more readily built into core subject classes, so that students could engage with the tool under direct instruction. Additional funding, training, and other resources may need to be provided by the state to ensure that staff receive adequate professional development needed to implement and create meaningful lessons around the HSBP.
- ◆ A consistent, statewide, HSBP platform and data system would be beneficial for housing associated information and provide an opportunity for parents and advisors to assist students with their HSBPs. Furthermore, this would mitigate loss of continuity for students transferring in and out of different high schools, ensuring they would be able to continue with their current HSBP instead of starting from scratch.
- ◆ The HSBP tool currently favors college bound students and the careers and pathways suggested for students by the tool is college centric. The tool should be revised to include a wider variety of career and educational paths that go beyond attending a 4 year college or university.
- ◆ To make the HSBP a viable planning tool, it needs to be more deeply embedded into core subjects or stand alone as a class, ensuring the tasks and activities completed as part of the HSBP provide relevancy for students and cultivate a richer understanding of the positive impact of the HSBP in making course selections and undertaking academic planning in alignment with their post high school goals.
- ◆ The attainment of communication, problem solving, collaboration, critical thinking, and general employability skills are important to the majority of stakeholders. This is notable given that many of the current pathway options involve a standardized test and do not provide direct learning opportunities to further develop these skills.
- ◆ Washington students should be provided with more direct learning experiences that connect to work, as well as opportunities to solve real-world problems, and practice employability skills.
- ◆ A good work ethic, problem-solving or critical thinking skills, and communication skills are the attributes most desired in employees of all levels. In comparison, entry level job seekers lack

experience and understanding when it comes to what needs to be done to apply for a job, interview, show up consistently, and “work hard”.

- ◆ Future employees need some amount of pertinent work experience and to be better prepared for the interview and hiring process in general. This includes interview experience, a solid resume free of typos and spelling errors, the ability to look professional, and possess relevant knowledge of the company or job they are interviewing for. In contrast, job applicants typically lack basic experience in these areas, even though these skills were reported as something that should be learned in school, prior to applying for jobs.

## SUMMARY OF KEY FINDINGS YEARS 1-3

---

### OVERARCHING FINDINGS YEARS 1-3

- ◆ In each year of the study there have been findings indicating changes should be made to the existing pathways. In YR1 there was more uncertainty as to whether there should be changes or additions to the current graduation pathway options, with roughly one-third of all respondents neither agreeing or disagreeing with related response statements addressing whether or not changes should be made to the existing eight pathways. This may have been due in part to findings showing that the majority of stakeholders in YR1 felt uninformed regarding the graduation pathway options in general. In Year 2 most respondents agreed that changes should be made to the current graduation pathway options, with a larger proportion of high school administrators & personnel than district personnel agreeing that changes should be made. In Year 3, about half of educators responding to the District Survey agreed that changes should be made (YR1, YR2 & YR3).
- ◆ The current graduation pathway options do not always align with students’ post-graduation goals and need to be more relevant to what students want to do and achieve beyond high school. Stakeholders in each year of the project indicated that for many students the current pathway options do not provide a meaningful trajectory for organizing their learning in the context of their intended pursuits beyond high school (YR1, YR2, & YR3).
- ◆ In each year of the project stakeholders reported there were barriers to offering all of the graduation pathway options. The most cited barriers included lack of resources, financial constraints/lack of funding, lack of certified teachers or staffing in general (YR1, YR2 & YR3),
- ◆ Respondents from districts/schools who reported they did not offer all the available graduation pathways suggested changes to address lack of funding, issues with staffing, and scheduling barriers would allow them to offer more pathway options (YR1, YR2 & YR3).

- ◆ Results from open-ended survey items and feedback from focus group participants indicated that respondents believed the only graduation pathway option for students who do not test well, do not have strong reading or math skills, or are otherwise unable to meet one of the graduation pathway options involving a standardized assessment or other type of test, is the CTE sequence pathway. Therefore, it is highly inequitable if districts in the state do not have the ability to offer a CTE sequence that meets the pathway requirement. As of the 2020-21 school year, 19 percent of districts reported they are unable to offer a CTE sequence that meets pathway requirements (YR1, YR2 & YR3).
- ◆ Based on data from open-ended survey items and focus group discussions in YR1, YR2 and YR3, the area of greatest concern for stakeholders is the lack of equity for English learners (ELL's), students with a 504 plan, students receiving special education services, students experiencing homelessness and other systemically marginalized populations when it comes to accessing a meaningful graduation pathway that aligns with their High School & Beyond Plan (YR1, YR2 & YR3).
- ◆ The CTE pathway was another area that was consistently cited by survey respondents and focus group participants in each year of the study as being inequitable, especially for alternative and small to medium schools with fewer options for offering a variety of CTE courses, let alone a sequence, taught by certified teachers. The majority of educator respondents from districts that have a CTE sequence/s available did not feel that the sequence/s met the needs of all or most students or did not match their post high school plans. This implies that a large number of students in the state do not have access to a pathway that meets their needs and is relevant to their future goals (YR1, YR2 & YR3).
- ◆ Respondents noted in Year 1 that gainful employment, financial and domestic independence, and the desire to contribute to society in a meaningful way, are worthy post-graduation goals and that a graduation pathway option specific to these types of goals should be available. Data collected during focus groups and on open-ended survey items in Years 2 & 3 further indicated that, regardless of students' post high school goals, there is a need for graduation pathway options to provide more opportunities for students to learn skills that prepare them for life and employability (YR1, YR2 & YR3).
- ◆ Respondents pointed out in Year 1 that the majority of current graduation pathway options address enrollment in some type of continuing education, or enlistment in a military branch, but lack options for students intending to enter the workforce immediately after school. Data collected during focus groups and on open-ended response survey items in Year 2 also indicated there is a lack of pathway options for students that intend to enter the trades or workforce directly after high school. In addition, students with these post high school goals lack opportunities for preparation and are largely unsupported by the graduation pathway options (YR1, YR2 & YR3).

## FINDINGS ORGANIZED BY RESEARCH QUESTIONS

### WHAT CHANGES, IF ANY, SHOULD BE MADE TO THE EXISTING EIGHT PATHWAYS?

- ◆ Changes should be made to the current graduation pathway options in order to address equity and alignment to students' post-graduation goals (YR1, YR2 & YR3).
- ◆ The current graduation pathway options do not always align with student's post-graduation goals and need to be more relevant to what students want to do and achieve beyond high school. (YR1, YR2, & YR3).
- ◆ Graduation pathways options need to include more opportunities for exploration. Results from open-ended items on the Stakeholder Survey and feedback from Focus Group participants in YR1 indicated that the current pathway options "lack" the opportunity for student exploration. In YR2 stakeholders also reported disliking that there is little option to explore future academic interests or career paths during high school and would rather see more room for exploration included in the graduation pathway options (YR1 & YR2).
- ◆ Educators indicated in open-ended items that changes or accommodations should be made for small, rural and Alternative Learning Environment (ALE) schools as they do not have the resources to offer many of the pathway options (YR3).
- ◆ The majority of open-ended responses indicated the need for pathways and graduation requirements to focus less on college readiness and more on real-world skills such as financial literacy, life skills, and employability (YR3).
- ◆ Data suggests there needs to be more flexibility within graduation pathway options, especially with regard to the CTE pathway. Stakeholders strongly believe that high school should be a time of exploration for students and that it's unrealistic to expect students to know what they want to do beyond high school when they are freshman or even sophomores and juniors and yet if students intend to successfully utilize the CTE pathway option they are expected to know early on in their high school career what they might want to do beyond high school or at the very least, to focus on starting as a Freshman or Sophomore (YR2).
- ◆ Additionally, respondents noted that there should be more freedom to explore classes within the CTE pathway, rather than requiring students to choose a sequence and stick with it, citing that there is lack of real knowledge about a given CTE sequence until students take the first few classes. Specifically, respondents indicated that students should be allowed to take any combination of courses to fulfill the two credit CTE graduation pathway requirement (YR2).
- ◆ Stakeholders expressed a desire to reduce graduation requirements in general, stating that students were overburdened with various graduation requirements and that with each additional requirement the barriers to graduation increase. Specifically, many stakeholders indicated they were unclear on the role of the high school diploma, what obtaining a diploma means for students, and whether or not adding additional graduation requirements was truly supporting

students in their post-graduation goals or simply making it harder for them to graduate from high school (YR2).

- ◆ Overwhelmingly, adults and students were appreciative that multiple pathways to graduation were available (YR1).
- ◆ There needs to be a statewide system in place for tracking graduation pathway progress for all students regardless of what school or district they are in or move into (YR1).

---

## WHAT ARE THE PERCEIVED BARRIERS TO OFFERING ALL OF THE GRADUATION PATHWAYS AT BOTH THE SCHOOL AND DISTRICT LEVEL?

- ◆ In each year of the project stakeholders reported there were barriers to offering all of the graduation pathway options. The most cited barriers included lack of resources, financial constraints/lack of funding, lack of certified teachers or staffing in general (YR1, YR2 & YR3), and a lack of clarity around articulation agreements needed to implement Dual Credit options (YR1). This included lack of certified staff to teach dual credit classes on high school campuses, lack of certified staff to teach CTE courses to offer sequences, and difficulty coordinating offsite ASVAB testing (YR1). These barriers were specifically identified with regards to the CTE pathway and Bridge to College option. Limitations put in place due to COVID during the 2020-21 school year were also cited as a barrier to offering all the graduation pathways for some districts/schools (YR2).
- ◆ Respondent perceptions indicate that satisfying the 24-credit graduation requirement does not leave time for students to meet the additional requirements of a graduation pathway (YR1).
- ◆ Resources needed to offer some of the testing options, transitional courses and dual enrollment options are insufficient or not available (YR1).
- ◆ Additional information and experience implementing the graduation pathway options is needed in order to fully identify the true barriers to implementing all graduation pathway options (YR1).

---

## HOW CAN DISTRICTS ELIMINATE OR REDUCE BARRIERS TO OFFERING ALL OF THE GRADUATION PATHWAYS?

- ◆ Respondents from districts/schools who reported they did not offer all the available graduation pathways suggested changes were needed to address lack of funding, issues with staffing, and scheduling barriers that would allow them to offer more pathway options (YR1, YR2 & YR3).
- ◆ Additionally, respondents in districts/schools that did not offer a CTE pathway reported that, in order to offer the CTE pathway, they would need more funding and flexibility to include CTE credit earned online or in another type of remote setting. Similarly, respondents in districts/schools that

did not offer Bridge to College courses reported they would need additional resources and staffing in order to offer the Bridge to College pathway option (YR1 & YR2).

- ◆ Results from open-ended survey items and feedback from focus group participants indicate that respondents believe the only graduation pathway option for students who do not test well, do not have strong reading or math skills, or are otherwise unable to meet one of the graduation pathway options involving a standardized assessment or other type of test, is the CTE sequence pathway. Therefore, it is highly inequitable if districts in the state do not have the ability to offer a CTE sequence that meets the pathway requirement. As of the 2020-21 school year, 19 percent of districts reported they were unable to offer a CTE sequence that meets pathway requirements (YR1, YR2 & YR3).
- ◆ Overall most respondents described needing additional resources for small/rural districts. This included funds to offer dual credit and CTE classes and/or assessments such as AP or SAT/ACT, funds for teaching staff, and funds to attract and compensate local partners (YR3).
- ◆ It was indicated that widespread availability of statewide, online CTE courses (where applicable), taught by certified instructors, would allow the CTE pathway to be more readily offered even in smaller schools (YR1).
- ◆ More flexibility is needed around the requirements for CTE implementation, instructor certification requirements, and sequencing (YR1).
- ◆ Associated fees for testing, dual enrollment, and transition course pathways should be covered by the state if these pathways are to be successfully implemented (YR1).
- ◆ There needs to be more clarity around articulation agreements and more consistency around the state between secondary and post-secondary institutions when it comes to articulation (YR1).

---

DO ALL STUDENTS HAVE EQUITABLE ACCESS TO ALL OF THE GRADUATION PATHWAYS AND, IF NOT, WHAT ARE POTENTIAL STRATEGIES FOR REDUCING BARRIERS TO EQUITABLE ACCESS?

- ◆ Based on data from open-ended survey items and focus group discussions, the area of greatest concern is the lack of equity for English learners (ELL's), students with a 504 plan, students receiving special education services, students experiencing homelessness and other systemically marginalized populations when it comes to accessing a meaningful graduation pathway that aligns with their High School and Beyond Plan (YR1, YR2 & YR3).
- ◆ The CTE pathway was another area that was consistently cited by survey respondents and focus group participants as being inequitable, especially for alternative and small to medium schools with fewer options for offering a variety of CTE courses, let alone a sequence, taught by certified teachers. The majority of educator respondents from districts that have a CTE sequence/s available did not feel that the sequence/s met the needs of all or most students or did not match

their post high school plans. This implies that a large number of students in the state do not have access to a pathway that meets their needs and is relevant to their future goals (YR1, YR2 & YR3).

- ◆ Survey results indicate that the current graduation pathway options may not meet the needs of all students and specifically their intended goals beyond high school. Indeed, only 40 percent of educator stakeholders in Year 2 reported that 0-75 percent of students had pathway options that reflected their HSBP. In Year 3, only 48 percent of respondents indicated all students had equitable access (YR2 & YR3).
- ◆ One of the current graduation pathway options requires students to meet the standard on the ASVAB (Armed Services Vocational Aptitude Battery) by scoring at least the minimum established by the military for eligibility to serve in a branch of the armed forces. Feedback from respondents indicates that many students are utilizing this pathway option to “check the box” for meeting a graduation pathway option even though they do not intend to enter the armed forces and the ASVAB pathway does not meaningfully reflect their goals beyond high school (YR2).
- ◆ Nearly one-half of students surveyed, and just over one-half of parents/caregivers surveyed, were not worried about graduating. However, parents/caregivers and students of color, as well as parents/caregivers of students receiving special education services, and students receiving special education services, were all more likely to be worried about graduation than their counterparts (YR2).
- ◆ Both students and parents/caregivers indicated that grades, COVID-19, and hybrid/online learning were the top reasons causing them to worry that they might not graduate. While parents/caregivers and students were less concerned with COVID-19 health related issues, they indicated they were worried about the impact of COVID-19 policies on access to certain types of testing needed to graduate and the related difficulties with remote learning. There were also concerns expressed about the negative impact of online learning in terms of getting needed CTE courses not conducive to online learning (YR2).
- ◆ Nearly one-third of students reported that they are not good at test taking. Parents/caregivers tended to rate their child(ren) just slightly lower in test taking capabilities. This has evidence-based implications for how realistic it is to expect these students to satisfy any of the - graduation pathways options requiring a math or ELA assessment. This is very important given the high proportion of graduation pathway options that require standardized testing to meet the requirement, including the state testing pathway, which is currently the most uniformly offered graduation pathway option (YR2).
- ◆ In order for the pathway options to be equitable for ELL’s, students with a 504 plan, students receiving special education services and other systemically marginalized populations, respondents proposed that there needs to be pathway options that focus on employability, skills needed to live independently and where math and English proficiency is demonstrated in an applied way (YR1).

- ◆ More than 75% of respondents reported that the State Assessment, SAT/ACT, and Dual Credit graduation pathway options were available, while less than 50% of respondents reported that the Transition Courses graduation pathway was available (YR1).
- ◆ Students and educators differ significantly in their levels of awareness of what is available (YR1).
- ◆ Students are less likely to be aware of the new graduation pathway options (YR1).
- ◆ The Dual Credit pathway lacks equity given the associated costs (YR1).
- ◆ Without clarity on articulation agreements and lack of consistency on how they are made, the Dual Credit pathway will remain inequitable (YR1).
- ◆ Access to a statewide database, tracking graduation pathway progress for all students would be more equitable in terms of successful completion of a high school graduation pathway regardless of mobility (YR1).

---

## SHOULD ADDITIONAL GRADUATION PATHWAYS BE INCLUDED AND IF SO, WHAT PATHWAYS SHOULD BE ADDED AND WHAT IS THE ASSOCIATED RATIONALE FOR DOING SO?

- ◆ Respondents noted that gainful employment, financial and domestic independence, and the desire to contribute to society in a meaningful way, are worthy post-graduation goals and that a graduation pathway option specific to these types of goals should be available. Data collected during focus groups and on open-ended survey items further indicated that, regardless of students' post high school goals, they would like to see increased opportunities for life skills and career readiness built into the graduation pathway options (YR1, YR2 & YR3).
- ◆ Respondents pointed out that the majority of current graduation pathway options address enrollment in some type of continuing education, or enlistment in a military branch, but lack options for students intending to enter the workforce immediately after school. Data collected during focus groups and on open-ended response survey items also indicated there is a lack of pathway options for students that intend to enter the trades directly after high school. In addition, students with these post high school goals lack opportunities for preparation and are largely unsupported by the graduation pathway options (YR1, YR2 & YR3).
- ◆ A large proportion of respondents indicated a meaningful pathway option for students receiving special education services needs to be added. Specifically, there is not currently a viable graduation pathway option for most students receiving special education services that is both meaningful and reflective of their post high school goals. Data gathered indicates that a large proportion of students receiving special education services are funneled into the CTE pathway regardless of whether the CTE sequences offered at their school have anything to do with their post high school plans (YR2 & YR3).
- ◆ Respondents suggested that a "Fine Arts" pathway would also support graduation pathway option equity for students by providing a pathway that not only addresses enrollment in post-

secondary education, but also provides a viable option for students wanting to enter the workforce in a fine arts related sector (YR1 & YR3).

- ◆ Qualitative data suggest that respondents see a need for more student driven pathways, where students have the chance to explore their interests, to engage with their learning, and to play an active role in what constitutes a meaningful graduation pathway for them (YR2 & YR3).
- ◆ The majority of survey respondents (educators, students, and parents/caregivers) agreed that an employability/life skills pathway should be added (YR1 & YR2).
- ◆ The majority of students in Year 1 indicated they know what they are going to do after graduating from High School. Despite this, students are skeptical of the applicability of the graduation pathway options toward their future plans. This theme continued into Year 2 with more than one-half of students and parents/caregivers surveyed felt that only “a few” to “none” of the graduation pathway options would work for them (students) or their child/children. Additionally, nearly one-fourth of both student and parent respondents were “unsure” if the graduation pathways would work for them (students) or their child/children (YR1 & YR2).
- ◆ Open-ended feedback in Year 3 suggested a non-test pathway option that should be added that is accessible to students in ALE programs (YR3).
- ◆ Most educators indicated that additional graduation pathways should be made available to students. Larger districts tended to agree more that pathway options should be increased, while smaller districts reported a higher rate of being unsure (YR2).
- ◆ The majority of all respondents (educators, students, and parents/caregivers) agreed that completion of an industry recognized credential should be added as a graduation pathway (YR2).
- ◆ Respondents who opted to provide additional feedback indicated that pathways will not be equitable until there are additional graduation pathway options that do not rely solely on a standardized test to measure academic or skill attainment and proficiency (YR2).
- ◆ Respondents think graduation pathway options should be added to address the barriers smaller schools and districts face when it comes to offering the current graduation pathway options (YR2).
- ◆ Data suggests the need for a pathway focused on employability is directly related to the perceived lack of equity for systemically marginalized student populations to access meaningful pathway options (YR1).

The following additional pathway suggestions were also mentioned by survey respondents, though not as consistently as the previously summarized suggestions:

1. 24 Credit Pathway – Qualitative data suggests that a number of stakeholders would like to see a pathway added that requires students to pass all 24 credit requirements with a minimum grade point average or higher (YR1 & YR2).

2. Capstone Project/Portfolio/Body of Evidence Pathway – A number of survey respondents and focus group participants indicated there is a need for additional graduation pathway options that include opportunities for applied learning and opportunities to demonstrate skill attainment, such as apprenticeships and other mastery-based learning. Data collected during focus groups and on open-ended survey items in Year 2 again indicated that opportunities for mastery-based learning should be integrated into graduation pathway options and that graduation pathways options should not rely solely upon standardized assessments to measure skill attainment and content mastery (YR1 & YR2).
3. Post-secondary Acceptance Pathway – While survey respondents indicated on open responses questions that this was a pathway that should be added, follow up data collected during focus groups showed a divide amongst attendees, with half expressing negative feedback and half expressing positive feedback. However, focus group participants on both sides agreed that actual enrollment, or having taken the steps to complete the financial aid application process, is a better indicator of a successful Post-Secondary Acceptance pathway than acceptance alone, since these steps signify a true intent and are therefore more likely to align to the High School and Beyond Plan (YR1).
4. Testing Pathway – Respondents often pointed out that the majority of existing pathway options rely heavily on testing to indicate successful completion of the pathway and therefore it would be prudent to have a single pathway that includes all the tests students can take towards graduation (YR1).

---

## DO THE GRADUATION PATHWAYS ALIGN TO PROFILE OF A GRADUATE?

- ◆ Overall, only 44% of Stakeholder Survey respondents indicated they were familiar with the Profile of a Graduate.
- ◆ Stakeholder Survey respondents indicated that the diploma fulfills the purpose of a Profile of a Graduate moderately well to very well. Of the diploma components, the High School & Beyond Plan was the lowest rated in terms of the fulfillment of its purpose (YR3).
- ◆ The highest rated pathways in terms of fulling the goals of the Profile of a Graduate were the CTE Sequence and Dual Credit Courses Pathway. Specifically, over 70 percent of respondents indicated that these pathways allowed students to develop or demonstrate cultivation of personal growth and knowledge, and problem solving skills moderately well to very well. (YR3)
- ◆ Everyone participating in the Focus Group discussions was also in agreement that the pathways are largely inequitable to special education students, students in small rural school districts and students in ALE schools, and therefore not reflective of the Profile of the Graduate, which should encompass all students in the Washington K-12 education system (YR3).

---

## HOW IS THE HIGH SCHOOL AND BEYOND PLAN BEING IMPLEMENTED?

- ◆ Only about half (58 percent) of the Recent High School Graduates and current High School Students (48 percent) were familiar with the High School and Beyond Plan. Given this is a graduation requirement and every high school student should be completing a High School and Beyond plan, these findings are important in that they may indicate the HSBP is not being completed in all high schools and districts in a meaningful way that students are aware of (YR3).
- ◆ Similarly, while the majority of educators (88 percent) were familiar with the High School and Beyond Plan it seems somewhat surprising that 12% of educators were “unsure” if they were familiar with the HSBP given it is a requirement for students statewide (YR3).
- ◆ Focus group participants reported varying levels of implementation, with the majority of participants indicating the HSBP is a “check the box” activity with little or no relevance to the actual future plans of students and therefore implementation was minimal (YR3).
- ◆ Focus group participants also shared that they like the concept of the HSBP and think it could be a positive tool for helping students plan courses of study that support their post-graduation goals, but that additional direction from the state, including general implementation guidelines, associated timelines and accountability requirements, would be helpful in ensuring all students in the state are meeting this graduation requirement in a meaningful way, regardless of school they attend. Additionally, focus group participants felt it would be beneficial if a school level administrator was accountable for ensuring the HSBP was fully implemented, even if the responsible administrator delegated associated tasks to other personnel (YR3).

---

## WHAT IMPROVEMENT COULD BE MADE TO THE HSBP TO MAKE IT A BETTER TOOL FOR STUDENTS TO PLAN THEIR FUTURE AFTER HIGH SCHOOL?

- ◆ Responses on both the District and Stakeholder survey indicated that more information about the HSBP needs to be provided to students and parents early on in the high school career, so that there is an opportunity for students to really utilize the tool for its intended purpose. Based on collected data, many students wait until their senior year to complete their HSBP and at that point it is considered a, “check the box” activity and cannot be completed in a meaningful way (YR3).
- ◆ Respondents also suggested that the HSBP would carry more meaning if it was a more individualized process in which students could work directly with advisors and parents to complete the tool in a thoughtful manner. As well, it was suggested that the tool be completed as part of a separate class, or built into core subject classes so that students could complete the tool under direct instruction (YR3).

- ◆ Respondents communicated that this would likely require additional funding and resources from the state to ensure that staff received adequate professional development to implement and create meaningful lessons around the HSBP (YR3).
- ◆ Regarding the HSBP platform itself and the tools included, it was suggested that a consistent statewide HSBP platform and data system would be beneficial for housing associated information. This would also provide an opportunity for parents and advisors to access and assist students with their plans. Furthermore, respondents indicated that students transferring in and out of different high schools would be able to continue with their current HSBP instead of restarting at every new school if there were a statewide system to house individual HSBPs (YR3).
- ◆ They also indicated that the HSBP seemed to be geared specifically towards college bound students and that the careers and pathways suggested for students were very, “college heavy”. Additional feedback indicated that the HSBP tool be revised to include a wider variety of career and educational paths beyond attending a 4 year college or university (YR3).

---

## WHAT IMPROVEMENT COULD BE MADE TO THE HSBP TO MAKE IT A BETTER TOOL FOR STUDENTS TO MAKE DECISIONS ABOUT COURSES, GRADUATION PATHWAY OPTIONS, OTHER ACADEMIC AND CAREER LEARNING ACTIVITIES?

- ◆ Findings indicated that the HSBP needs to be individualized based on student needs and reviewed on a regular basis with advisors, students and parents and revised accordingly to ensure that the HSBP accurately reflects the student and serves as a better academic planning tool. Starting the HSBP as early as middle school would allow it to be a “living” document that is updated and reevaluated consistently to reflect a student’s changing needs and interests (YR3).
- ◆ Data suggests that in order to make the HSBP a viable planning tool, it needs to be more incorporated into core subjects or stand alone as a class. Survey and focus group participants indicated this would help make the tasks and activities completed as part of the HSBP more meaningful for students and provide them with a deeper understanding as to the relevance of the HSBP in course selection and academic planning in alignment with their post high school goals (YR3).
- ◆ In order to ensure consistent implementation of the HSBP research participants indicated that having a consistent platform across the state would be of great benefit. Specifically, if the HSBP was housed on a consistent, statewide, digital platform advisors, teachers, parents and students could access plans regularly for review and updating. Additionally, students transferring in and out of various high schools would not be penalized or lose progress on their plan (YR3).
- ◆ The HSBP, “Career Exploration Quiz” needs to include more diversity when it comes to the skills, sectors, and education programs suggested to students. Respondents shared that they felt this

feature was geared toward careers that require a college education and that in order to be a useful planning tool the program needed to take into account that not every student intends to start a career that requires a college degree (YR3)

- ◆ In order to make the HSBP a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities survey respondents and focus group participants indicated that students need opportunities to learn more about the graduation pathway options in general, followed by guidance in creating a HSBP that is supported by one of the graduation pathway options and is driven by their skills and interests and not based on what they can, “pass”. This includes making sure parents are included in opportunities to learn more about both the HSBP and the graduation pathway options, so that they are poised to serve as actively engaged and advocates (YR3).

---

## ARE THE GRADUATION PATHWAYS RELEVANT TO STUDENTS AND HOW COULD THEY BE MORE RELEVANT?

- ◆ Of Stakeholder Survey respondents that indicated they were familiar with the current graduation pathway options, just over half (51 percent) indicated the graduation pathway options were not relevant to all students. Related qualitative data indicated that this lack of relevancy is directly related to the lack of equity for all types of students and schools when it comes to the graduation pathway options. Specifically, respondents shared that because the pathways are not equitable or accessible to all students, they are not a relevant measure of high school completion and need to focus more on options for students receiving special education services, unconventional students, and students that are not college bound immediately after high school, if they are to become more relevant (YR3).
- ◆ Respondents also reported that students are typically satisfying graduation pathway option requirements via a process of elimination, starting with the easiest pathway to satisfy, versus selecting a pathway that supports their post-graduation goals. Additionally, they indicated that the pathway options some students end up being pushed into have no relevance to their dreams or interests. This was indicated as especially common for students who cannot meet the requirements of graduation pathways requiring a standardized assessment and are then pushed into the CTE pathway, even though the courses they need to take to satisfy the CTE graduation pathway requirement have no relevance to them (YR3).
- ◆ As shown, the majority of respondents agreed that communication skills (96 percent), problem solving skills (93 percent), collaboration skills (91 percent) and critical thinking skills (91 percent) were among the most important. The skill that was rated as being the least important was test taking (25 percent), which is notable given that half of the current pathway options involve a

standardized test. It was also indicated that a two year degree (29 percent), four year degree (27 percent) and foreign language skills (30 percent) were not as important (YR3).

- ◆ When asked about the skills and attributes needed in the current workforce, the majority of respondents agreed that communication skills (96 percent), problem solving skills (93 percent), collaboration skills (91 percent) and critical thinking skills (91 percent) were among the most important. The skill that was rated as being the least important was test taking (25 percent), which is notable given that many of the current pathway options involve a standardized test and do not provide direct learning opportunities to develop the skills identified as important. Additionally, the majority of respondents (98 percent) indicated that general employability skills are necessary for post high school success (YR3).
- ◆ In terms of the type of learning opportunities available to WA students most Stakeholder Survey respondents indicated that WA students should be provided with more direct experiences that connect to work (80 percent), as well as opportunities to work on real-world problems (77 percent), and employability skill practice (76 percent). In addition, about half of all respondents felt that WA students are already provided with the right amount of math and English (47 percent) and college readiness (47 percent) (YR3).
- ◆ Of respondents that are responsible for hiring or supervising employees as part of their current job duties (n=283) a good work ethic, problem-solving or critical thinking skills, and communication skills were the attributes they most desired in employees of all levels. Respondents also overwhelmingly commented that overall, today's entry level job seekers lack experience and understanding when it comes to what needs to be done to apply for a job, interview, show up reliably and consistently, and "work hard". These findings were resoundingly supported by data collected from Industry Stakeholder interviews (YR3).
- ◆ The majority of Industry Stakeholder Interview participants indicated that they wished potential job applicants, at all levels, had some amount of pertinent work experience and were better prepared for the interview and hiring process in general. Including interview experience, a solid resume free of typos and spelling errors, look professional, and have some relevant knowledge of the company or job they are interviewing for. Additionally, interviewees overwhelmingly indicated that applicants lack basic experience in these areas and felt that this was something that should be learned in school, prior to ever applying for a job (YR3).

## SUGGESTIONS FOR FUTURE DEVELOPMENT

While the scope and sequence of the research regarding the current Graduation Pathway Options in the State of Washington described in this report was intended to be a three year project, it is our hope that the current findings provide the basis for project sustainability beyond these three years. Given the time, effort and resources that goes into collecting data, engaging stakeholders and compiling the results in a meaningful way, the ultimate goal of the work done to this point is to ensure it has a lasting impact beyond the life of the project. After all, data is only as good as it is useful to the stakeholders engaged with the findings.

Research questions should indeed lead to more questions and there is no limit to the directions the current research and findings described in this report can go in the future. The following suggestions for future development are intended as a jumping off point for continuing to explore, improve and refine the WA Graduation Pathway Options to ensure that they are equitable, meaningful, and relevant to each and every student. These suggestions are based on the data and feedback collected from stakeholders across the three years of the project and represent potential data driven ways to build on the work that has been done thus far.

1. Students should have pathway options that more accurately reflect Washington’s Profile of a Graduate. Specifically, pathway options need to provide more opportunities for students to cultivate personal growth and knowledge, solve problems, communicate effectively, sustain wellness, embrace differences/diversity and master life skills/self-agency. Satisfying the requirements of current graduation pathway options do not necessarily support the important goals of Profile of a Graduate.

*“My son is four-year college bound, but where are the hands-on experiences so he knows how to navigate life outside the classroom? I want him to have real world learning experiences in high school. He’s smart and can pass all of the tests, but I worry when he gets to college, he won’t know how to navigate the other important aspects of life.” – Parent*

2. Graduation pathways need to include options that are meaningful for students regardless of their post high school goals and dreams. Specifically, there is a great need for graduation pathway options that require opportunities to master the skills and attributes needed to succeed in the 21<sup>st</sup> century job market, regardless of whether job attainment occurs immediately after high school or during/after post-secondary education. Future work in this area also ensures the graduation pathway options are more aligned with the Washington Profile of a Graduate’s definition of the purpose of the diploma.

*“Within the past two years, I’ve noticed people come to apply for a position lacking leadership skills and when asked how they would handle conflict resolution they don’t seem to know how to navigate through that. Conflict resolution can be a big deal!” - HR Manager, Walsh Construction*

*“10 percent of our students are going to be farmers and we don’t recognize these things, there aren’t pathways for them. They actually know what they want to do, and we can’t support them.” - Educator*

3. Students should have pathway options that truly reflect their High School and Beyond Plan. This requires that the High School and Beyond Plan be a meaningful instrument that informs the supports students receive in planning their coursework, satisfying the requirements of their chosen graduation pathway and ensuring they leave high school with the skills, knowledge and experiences they need to achieve their post-graduation goals, regardless of what those are.

*“As a student I wish that we worked backwards, where we asked students what they want to do and who they want to be and then built a pathway around that.” – Student*

4. Data collected during all three years of the project strongly indicate the need for additional graduation pathway options, especially pathways that are not assessment based. Specifically, graduation pathways should be added that positively impact both equity for districts/schools in their ability to offer all of the graduation pathway options, and increase the likelihood that all students have access to pathways that are meaningful and supportive of their post-graduation goals. Future work on the incorporation, design, and parameters of additional pathways is needed and should be informed by stakeholders such as educators, parents/caregivers, industry professionals, other content experts, and most especially students.

*“I’m from a small district with only two CTE pathways and these are not meaningful to most of the students who are taking them, but it’s their only option, so we’re all complicit in making them take courses that mean nothing to them, because we want them to have that diploma.” – Educator*

5. Graduation pathway options and the parameters under which they are satisfied need to be more student driven and incorporate greater opportunities for mastery-based learning. This provides students the opportunity to apply their learning in real world settings, and demonstrate skill attainment and academic mastery in ways that truly reflect their learning experiences, inspire them to be lifelong learners, and honor their post-graduation goals.

*“Not every student has the luxury of missing classes for external learning opportunities, but I’ve learned absolutely nothing in school taking and passing my AP tests. The things I’ve learned that matter most to me have all come from the opportunities I have outside of school, in the real world.” – Student*

6. All projects are limited by time and budgetary restraints, leaving plenty of opportunity for future work that expands on goals of the original project. Logical next steps for continued research on the graduation pathway options, might include focusing on collecting data from students and recent graduates as a standalone sample. These populations can be hard to engage when included as a part of a larger stakeholder sample and deserve the time and resources needed to create research instruments and protocols dedicated to collecting data specific to these populations. Given that students were not included in the original RFP for the project and were added to ensure a complete sample was provided, more time should be spent focusing on collecting data from a diverse sample of students and post graduates only.

*“We so rarely ask students what they want, what they need. We tell them what we think they need and should do, but that’s not what prepares a student for life. It doesn’t inspire them and it doesn’t help them. We are failing students if we don’t ask them what they need.” – Educator*

*“No one knows what I want to do after I leave school. Maybe I don’t even know, but it’s not the pathways. I don’t know how to get where I want and do what I’m supposed to at the same time.” - Student*

## STUDY BACKGROUND

Per Engrossed Second Substitute House Bill 1599 (E2SHB 1599), beginning with the class of 2020 Washington students are required to meet the state and local credit graduation requirements, complete a High School and Beyond Plan (HSBP), and complete one of the following graduation pathway options in order to graduate<sup>3</sup>:

---

<sup>3</sup> The armed services test (ASVAB) and the CTE course sequence are new graduation pathways; the other pathways described in HB 1599 have been previously approved alternatives to the assessment requirements. Students who pursue these pathways (ASVAB or CTE) do not need to meet English and math requirements separately. English and math content are embedded in both pathways—and both pathways meet the purpose of a high school diploma: to declare that a student is ready for success in postsecondary education, gainful employment, and citizenship, and is equipped with the skills to be a lifelong learner (RCW 28A.230.090). A student who meets either the ASVAB standard or the CTE pathway requirements has met the graduation pathway requirement.

- 1) Meet or exceed the graduation scores on state high school assessments in English Language Arts (ELA) and Math (Smarter Balanced Assessments or Washington Access to Instruction & Measurement);
- 2) Earn credit in dual credit courses (for example, Running Start or College in the High School) in ELA and math;
- 3) Earn high school credit, with a C+ grade, or receiving a three or higher on the Advanced Placement (AP) exam, or equivalent, in AP, International Baccalaureate (IB), or Cambridge International (CI) courses in ELA and mathematics; or receiving a four or higher on International Baccalaureate exams;
- 4) Meet or exceed the graduation scores in the math and reading/English/writing portions of the SAT or ACT;
- 5) Earn credit in a transition course, as defined in E2SHB 1599, (including but not limited to a Bridge to College course, which is a senior course for students who earned a Level 2 on the Smarter Balanced Assessment);
- 6) Meet any combination of at least one ELA and one math option of those options listed in #1-5;
- 7) Meet standards on the ASVAB (Armed Services Vocational Aptitude Battery); and
- 8) Complete a sequence of Career and Technical Education (CTE) courses (Washington State Board of Education)<sup>4</sup>.

In order to meet the reporting requirements set forth by the education committees of the legislature, the SBE partnered with Strobel Consulting to design and implement surveys and focus groups to address SBE's need to collect useful data from district administrators/personnel, school administrators/personnel, parents/caregivers, and most importantly, students. In the third year of the project Strobel Consulting conducted a School District Survey, Stakeholder Feedback Survey, Focus Groups and Industry Stakeholder Interviews during spring of 2022.

Beyond addressing the reporting requirements of E2SHB 1599, the following project goals and objectives include lessons learned and potential strategies to improve the high school graduation pathway options, future data collection, and project planning and implementation. Specifically, the overarching objectives of the project are:

- a. Survey findings and associated reports provide comprehensive and relevant information, including potential strategies that are useful to SBE in making well-informed decisions on what to include in its reports to the legislature.
- b. Data collected as part of this project informs reasonable and valid evidence based decision-making processes.

---

<sup>4</sup> Washington State Board of Education. Graduation Pathways <http://www.sbe.wa.gov/our-work/graduation-requirements/graduation-pathways>

- c. Survey, interview, and focus group respondents are representative of Washington’s population, not only demographically, but also in terms of their role in the education system.
- d. Survey and interview questions, formats, and delivery modes are accessible to diverse potential participants, including, but not limited to: people from communities of color, people whose preferred mode of communication is not email, people whose home language is not English, people with disabilities, and people from households with a range of income levels and geographic characteristics (e.g. urban / suburban / rural / eastern Washington / western Washington).

The following report provides detailed information on the findings of the third year of the Washington Graduation Pathway Options Stakeholder Feedback project. Key findings from survey results, gathered from Educators, Parents/Guardians, Community Members and Students regarding the graduation pathway options, are presented along with feedback obtained via Focus Groups and Industry Stakeholder Interviews. The report concludes by highlighting lessons learned.

## STUDY OVERVIEW

The District Follow Up Survey (District Survey), Stakeholder Survey, Focus Groups and Industry Stakeholder Interviews were conducted in an effort to understand the high school graduation pathway options available in the state of Washington within the context of the overarching research questions (listed below). During year three of the project, all respondents were given an opportunity to provide open-ended feedback about the High School and Beyond Plan and Profile of a Graduate in relation to the graduation pathway options. As well, respondents were asked about the skills needed to achieve gainful employment and to share their perceptions regarding skills current job seekers lack. District and school administrators were asked about the barriers that prevented their district from offering all of the graduation pathways and were given the opportunity to provide open-ended feedback about the graduation pathway options and recommendations for changes. The following research questions guided the development of the project and subsequent instruments and protocols:

1. What changes, if any, should be made to the existing eight pathways?
2. What are the perceived barriers to offering all of the graduation pathways at both the school and district level?
3. How can districts eliminate or reduce barriers to offering all of the graduation pathways?
4. Do all students have equitable access to all of the graduation pathways and, if not, what are potential strategies for reducing barriers to equitable access?
5. Should additional graduation pathways be included and if so, what pathways should be added and what is the associated rationale for doing so?

The year 3 scope of work was also expanded to address the following issues:

- a. How the High School and Beyond Plan is/was implemented in their school or district.
- b. What improvements could be made to the High School and Beyond Plan to make it a better tool for students to plan their future after high school
- c. What improvements could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities.
- d. Relevancy of pathways, and how to make them more relevant.
- e. Alignment of pathways to Profile of a Graduate

To collect data addressing the aforementioned research questions, a District Survey, Stakeholder Survey, Focus Groups and Industry Stakeholder Interviews were administered to, or hosted with, a wide range of Washington educators, parents/caregivers, community members and students. Dedicated efforts were made to include a diverse scope of participants reflective of the demography of both the state of Washington and educators in the state of Washington. The online window for District Survey and Stakeholder Survey completion was 60 days, during which time 25, and 868 responses were collected. The largest groups completing the Stakeholder Survey were Parents/Guardians (36%) and Educators (35%).

What follows is a description of the methods and measures used to collect the data and a detailed breakdown of the results.

## METHODOLOGY

The Washington Graduation Pathway Options Stakeholder Feedback Project Year Three (YR3) commenced in January of 2022 and concluded in July of 2022. In order to collect stakeholder feedback, educators, parents, community members, recent high school graduates and high school students were invited to participate in an online survey, “WA Graduation Pathway Options – Stakeholder Survey 2022” (Stakeholder Survey) that gathered feedback on the graduation pathway options in relation to skills needed to be successful post high school. District and school admin/personnel were also invited to participate in an online survey “WA Graduation Pathway Options – District Survey 2022” (District Survey) and Focus Groups that gathered feedback on the graduation pathway options as related to the High School and Beyond Plan and the Profile of a Graduate. Personnel responsible for hiring and/or managing employees representing various industries from a cross-section of locations in the state were contacted for brief Zoom or phone interviews regarding job skills. A total of 868 stakeholders completed the Stakeholder Survey, 25 District and School Admin/Personnel completed the District Survey, 11 educators participated in one

of four Focus Groups and 20 businesses participated in Zoom or phone Industry Stakeholder Interviews.

In order to ensure the maximum number of stakeholders were able to provide feedback by participating in project activities the Washington State Board of Education (SBE) notified stakeholders of the District Survey, Stakeholder Survey and Focus Groups via email using their listserv. The SBE also engaged in targeted Facebook advertising to inform recent high school graduates and current high school students of the survey opportunity. As well, Strobel Consulting reached out to stakeholders directly, by sending direct emails inviting them to participate and share the survey links and focus group information with their colleagues, staff, students, and parents/caregivers.

Additionally, as responses to the District Survey were collected, Strobel Consulting contacted educators who indicated they would like to participate in focus groups, to ask if they would share the Stakeholder Survey link and focus group information with their students and colleagues. This served as a way to inform stakeholders of opportunities to share related feedback and collect additional data from these stakeholder groups.

To recruit a diverse group of community stakeholders from businesses around the state to participating in Zoom or phone Industry Stakeholder Interviews Strobel Consulting compiled a contact list of personnel responsible for hiring and/or supervising employees and reached out to them directly via phone and email.

---

## QUANTITATIVE DATA COLLECTION METHODS

Quantitative data collected included the District Survey and Stakeholder Feedback Survey.

---

### DISTRICT SURVEY

School level and district personnel completed an online District Survey between June 1 and July 1, 2022. The survey, created by Strobel Consulting, was developed to measure:

- ◆ The barriers school districts have to offering all of the graduation pathways and potential strategies to eliminate or reduce those barriers;
- ◆ Whether changes to the existing graduation pathways should be made and what those changes should be;
- ◆ Whether all students have equitable access to all of the graduation pathways and, if not, potential strategies to reduce the barriers students may have to accessing all of the graduation pathways;
- ◆ Interest in focus group participation; and
- ◆ Demographic information.

---

## STAKEHOLDER SURVEY

Educators, parents/caregivers, community members, recent high school graduates, and students completed an online Stakeholder Survey between May 27 and July 23, 2022. The survey, created by Strobel Consulting, was available in both English and Spanish and was developed to measure:

- ◆ Whether changes to the existing graduation pathways should be made and what those changes should be;
- ◆ Whether modifications should be made to any of the existing pathways or pathways should be added;
- ◆ Important skills and attributes needed to be successful in the 21<sup>st</sup> century workforce;
- ◆ Skills necessary for success after high school graduation;
- ◆ Whether the High School and Beyond Plan, and graduation pathway options prepare students for post high school success;
- ◆ Relevance of the High School and Beyond Plan and graduation pathway options;
- ◆ Relevance of pathways, and how to make them more relevant;
- ◆ Alignment of pathways to Profile of a Graduate; and
- ◆ Demographic information.

Findings from the District and Stakeholder Surveys will be used to address the reporting requirements of E2SHB 1599 and the overarching project goals and objectives. In addition, the findings include lessons learned and potential strategies to improve both high school graduation pathway options and future project planning and implementation.

---

## QUALITATIVE DATA COLLECTION METHODS

Qualitative data collected included Focus Groups, Industry Stakeholder Interviews and open-ended survey data from the District and Stakeholder Surveys.

---

## FOCUS GROUPS

District and school stakeholders around the state were notified of the Focus Groups via SBE email distribution lists, the current District Survey, and direct contact with previous survey respondents who indicated they were interested in Focus Group participation and requested follow up communication by providing their contact information. Contacts on the SBE listserv were encouraged to share the Focus Group participation information with colleagues, other educators, and/or host Focus Groups for students. Emails included information about the Focus Groups, as well as instructions to register to attend or host (student) Focus Groups.

All available dates and times for the online Focus Groups were included in the SBE email. Each Focus Group was capped at seven participants to ensure the likelihood of successful moderation that

allowed all participants to have a chance to share their thoughts and feedback. All Focus Groups were open to all educators and focused on the following topics:

- 1) What improvements could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities and to plan their futures beyond high school.
- 2) Alignment of pathways to Profile of a Graduate, the relevancy of current pathways, and feedback on how to make them more relevant.

Every effort was made to recruit educators to host a Focus Group for students, however educators were a challenge to engage and those that did agree to host student Focus Groups, ended up canceling them.

Focus Groups took place online. This permitted more equitable access for all stakeholders that wanted to participate in a Focus Group regardless of their physical location. This also allowed for the observance of social distancing measures to continue to mitigate exposure and spread of the COVID-19 virus.

Focus Groups occurred over a period of one week from June 9, 2022 to June 16, 2022. Focus Group times ranged from 12:00 PM to 4:00 PM PDT to accommodate as many stakeholder schedules as possible. In total, four online Focus Groups were hosted, with a total of 11 participants. Focus Group sessions ranged in attendance from two to three attendees.

---

## INDUSTRY STAKEHOLDER INTERVIEWS

Industry stakeholders around the state were contacted via email and phone to recruit potential participants for a brief Zoom or phone interview. Various businesses representing industries within the state of Washington were notified of the project background and purpose and were invited to share the information and Strobel Consulting contact information with other colleagues and businesses.

If interested, potential participants were asked to provide available dates and times for the brief 15-30 minute interview. An email confirming the date and time, along with a Zoom meeting link if applicable, was then provided. Many stakeholders who were contacted via phone to gauge their interest level to participate opted to answer the interview questions at that time and therefore no email to schedule the interview or a subsequent Zoom link email was provided.

Every effort was made to conduct Industry Stakeholder Interviews with personnel representing a variety of Washington industries, business sizes, and locations.

Interview questions were designed to get more information about the types of skills and knowledge that employers find desirable, as well as the skills and knowledge that they find to be lacking in the current workforce. The full Industry Stakeholder Interview protocol can be found in Appendix D.

---

## OPEN-ENDED SURVEY QUESTIONS DISTRICT SURVEY

Survey respondents were given the opportunity to respond to one to five open-ended survey questions.

District and school educators from districts that do not currently offer all the graduation pathway options (per the Basic District Compliance Survey) were asked to describe the changes that need to happen for their district to offer all of the graduation pathway options. District and school educators who indicated changes should be made to the existing graduation pathway options were asked to elaborate on what those changes should be. As well, district and school educators who indicated that additional pathway options need to be added were asked to explain what those additions should be and why. And finally, educators that indicated all students in their district did not have equitable access to all of the graduation pathways were asked to describe potential strategies to reduce the barriers to accessing all the pathway options and/or the options that should be added to ensure each and every student has equitable access to the graduation pathway options.

All respondents were given the opportunity to share any additional feedback they had regarding the survey, or the graduation pathway options in general. Open-ended questions asked in response to previously selected answers were required, while the general open-ended question asked of all survey respondents was not. Open-ended questions allowed researchers to gain a deeper understanding of certain responses provided.

---

## OPEN-ENDED SURVEY QUESTIONS STAKEHOLDER SURVEY

Survey respondents were given the opportunity to respond to one to six open-ended survey questions.

Respondents who indicated they were responsible for hiring or supervising employees as part of their current job duties were asked to describe skills that today's job seekers lack. Respondents that indicated the current graduation pathway options were not relevant to all students were asked to describe how current pathway options could be more relevant for all students. As well, student respondents that indicated the graduation pathway options were not relevant to them were asked why they were not relevant and what would make them more relevant. Respondents that were familiar with the High School and Beyond Plan were asked to describe the improvements that could be made to make it a better tool for students to plan their future after high school and make decisions about courses, pathway options and other academic learning activities.

All respondents were given the opportunity to share any suggestions they may have for changing the existing pathways or adding additional pathways to better address these skills. Open-ended questions asked in response to previously selected answers were required, while the general open-

ended question asked of all survey respondents were not. Open-ended questions allowed researchers to gain a deeper understanding of certain responses provided.

## SAMPLE CHARACTERISTICS

### DISTRICT SURVEY RESPONDENT CHARACTERISTICS

District Follow-up Survey respondents included district administrators or personnel and high school administrators, teachers or personnel. The majority of respondents were district administrators, comprising 68 percent of the total sample.

**Table 1. District Survey Respondent Types**

Respondent Types	Count	Percent
District Administrators or Personnel	17	68%
High School Administrators, Teachers or personnel	8	32%
<b>Total</b>	<b>25</b>	

High School personnel were asked to indicate the type of high school where they worked. The majority (75 percent) of respondents indicated they worked at a traditional public high school.

**Table 2. District Survey Respondent School Types**

School Types	HS Admin, Teacher or Personnel
Traditional Public High School	75%
Alternative High School	12.5%
Reengagement High School	12.5%

To the extent possible, it was important that surveys were collected from a variety of district respondents to ensure that all populations, groups, and identities within the Washington school system had a chance to make their voices heard. All respondents were given an opportunity to indicate their gender, ethnicity, and racial identification to ensure that the diversity of responses received were indicative of the larger WA education system. Respondents also had the opportunity to decline to respond to any of the demographic questions. In each demographic category, between 8 percent and 12 percent of respondents declined to respond (Tables 3-4).

The majority of respondents were male (56%) and White (88%). It should be noted that the sample size (n=25) was extremely small, and not varied and diverse.

**Table 3. District Survey Respondent Demographics: Educator**

Demographic		Educator		WA State Educators <sup>5</sup>
		Count	Percent	
<b>Gender</b>	Male	14	56%	26%
	Female	8	32%	74%
	Decline to Respond	3	12%	ND
<b>Ethnicity</b>	Hispanic	2	8%	5%
	Hispanic - Decline to Respond	2	8%	ND
<b>Race</b>	American Indian or Alaskan Native	1	4%	>1%
	Asian	0	0%	3%
	Black, African American	0	0%	2%
	Native Hawaiian or Other Pacific Islander	0	0%	>1%
	White, Non-Hispanic	22	88%	87%
	Other	0	0%	1%
	Decline to Respond	2	8%	ND

In addition to demographic diversity, it was important that responses also come from various districts across the state. All educator respondents were asked to identify their district. Twenty four school districts of the 252 districts in the state that serve high school students, were represented in the survey. On average one educator from each district responded to the survey. The majority of districts represented in the survey were considered small to very small in size and offered at least five of the available pathway options. Given the small sample size of the District Survey it was not possible to analyze survey results by district demographics or respondent type.

**Table 4. District Survey Participating District Demographics**

Demographic		Educator	
		Count	Percent
<b>Size</b>	Small to Very Small	20	83%
	Medium	3	13%
	Large to Very Large	1	4%
<b>Grad Pathways Offered</b>	1-4 Pathways	1	3%
	5-7 Pathways	23	97%

<sup>5</sup> Washington Office of Superintendent of Public Instruction, 2021

## STAKEHOLDER SURVEY RESPONDENT CHARACTERISTICS

Stakeholder Survey respondents included educators, parents/caregivers, high school students, recent high school graduates, and community members. The majority of respondents were parents/caregivers, comprising 36 percent of the total sample, followed closely by educators at 35 percent.

**Table 5. Stakeholder Survey Respondent Types**

Respondent Types	Count	Percent
Educators	305	35.1%
Parents / Caregivers	314	36.2%
Community Member	159	18.3%
High School Students	64	7.4%
Recent High School Graduates	26	3.0%
<b>Total</b>	<b>868</b>	

Stakeholders were asked to indicate if they were members of any education or business related associations, groups, agencies, or organizations. Of the 868 respondents, 260 indicated membership in one or more of the following groups.

**Table 6. Stakeholder Survey Memberships and Associations**

Organization	Count	Percent
Association of Washington School Principals (AWSP)	41	10%
CTE General Advisory Council	10	2%
Educational Opportunity Gap Oversight and Accountability Committee (EOGOAC)	11	3%
Four-year Higher Education Institutions	17	4%
Office of the Superintendent of Public Instruction	7	2%
Parent Teacher Association (PTA)	42	10%
School Board	14	3%
Washington Association for Career and Technical Education (WA-ACTE)	28	7%
Washington Association of School Administrators (WASA)	38	9%
Washington Education Association (WEA)	91	21%
Washington State Apprenticeship and Training Council (WSATC)	6	1%
Washington State Board for Community and Technical Colleges (SBCTC)	6	1%
Washington State School Directors' Association (WSSDA)	16	4%
Other Association, Group, Agency, or Organization Representing - Business, Trades or Industry	33	8%
Other Association, Group, Agency, or Organization Representing - Education	48	11%
Other Association, Group, Agency, or Organization Representing - Parents	16	4%

To the extent possible, it was important that surveys were collected from a variety of respondents to ensure that all populations, groups, and identities within the Washington school system and community had a chance to make their voices heard. All respondents were given an opportunity to indicate their gender, ethnicity, and racial identification to help ensure that the diversity of responses received were indicative of the state of Wyoming. Respondents also had the opportunity to decline to respond to any of the demographic questions. In each demographic category, between 3 percent and 17 percent of respondents declined to respond (Tables 7-10).

With regard to gender, most of the stakeholder sub-groups were fairly evenly distributed and/or representative of the larger sample they represent, with a few exceptions. Parents/Guardians were slightly less balanced than adults in the state of WA, with more female respondents participating. However, among Parents/Guardians, females statistically tend to be more active participants with regards to their children’s school activities, so it is not surprising that the majority of Parent/Guardian respondents were female. High School Student and Recent High School Graduate stakeholders had the highest percentage of male respondents, at 69 percent which differs from the distribution of Washington state students in which 52% are male.

All respondents were asked to indicate the ethnicity and race they most identify as. High School Student respondents were more likely to indicate they were of Hispanic or Latinx origin (34 percent) than parent/caregiver (11 percent), educator (4 percent) or community member (8 percent) respondents. Parents/caregivers (10 percent) and educators (11 percent) were more likely to decline to provide this information.

With regard to race, the vast majority of respondents were White (70 percent), with 16 and 17 percent of parents/caregivers, educators, and students declining to provide racial identity. While this largely reflects the ethnicity of Washington, where 68 percent of the population is white, overall the sampling of survey respondents was more diverse than the state of Washington. Student and Recent High School Graduate respondents were more diverse than the population of Washington students in general and more likely to select Black, Asian, Native American, Other, or multiracial.

Parent/Guardian and Community Member respondents included more Native American and Black participants than the adult population in WA. As well, Educator respondents included more American Indian/Alaskan Native participants than the population of WA State educators. While Educators were less likely to be Asian or Black, the large number of “Decline to Respond” responses means it is unclear whether the actual sample is more or less diverse. Given that sampling parameters are based on the larger population from which data is being collected, the student, parent/caregiver, community member, and educator demographics for the state of Washington are provided in the following tables to help give context to the sampling.

As shown, educator respondents were fairly representative of the educator demographics in the state, while the student, community member and parent/caregiver respondents were slightly less representative in terms of gender and race, with more males than the general population of students

and adults and more American Indian/Alaskan Native, Black and Native Hawaiian respondents in terms of race. Additionally, there were slightly fewer Hispanic and Asian community member and parent/caregiver respondents than the state population. However, based on the lack of significance for all but one survey item when analyzing each item by racial identity, it is unlikely additional responses from Hispanic and Asian community members and/or parent/caregiver respondents would have altered the findings.

**Table 7. Stakeholder Survey Respondent Demographics: Overall**

## FOCUS GROUP PARTICIPANT CHARACTERISTICS

Due to the continued COVID-19 outbreak, all Focus Groups took place online via Zoom<sup>9</sup> during YR3. The Focus Groups took place in June and school/district staff, and students were invited to participate in a Focus Group covering the following topics:

- 1) What improvements could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities and to plan their futures beyond high school.
- 2) Alignment of pathways to Profile of a Graduate, the relevancy of current pathways, and feedback on how to make them more relevant.

There were 14 educators that registered to participate in one of 4 online Focus Groups to discuss the graduation pathways in the context of the High School and Beyond Plan and the alignment of a Profile of a Graduate. Of the 14 registered participants only 11 actually attended.

<sup>9</sup> Zoom Video Communications, Inc. is an American communications technology company headquartered in San Jose, California. It provides videotelephony and online chat services through a cloud-based peer-to-peer software platform and is used for teleconferencing, telecommuting, distance education, and social relations.

While all educators that participated in Focus Groups and the district survey were provided information to host a student Focus Group, none occurred. Two educators initially registered to host student Focus Groups, however each educator canceled prior to their scheduled Focus Group.

## INDUSTRY STAKEHOLDER INTERVIEW PARTICIPANT CHARACTERISTICS

Researchers contacted businesses in the State of Washington via email and phone to recruit participants for Industry Stakeholder Interviews. The interviews took place in July and August and targeted business owners, managers, human resources managers and/or other personnel in a supervisory role. The interviews included questions regarding the following topics:

1. Types of skills and knowledge that employers find desirable.
2. Skills and knowledge lacking in the current workforce.

Over 110 businesses in the state from a variety of industries including retail, hospitality, aerospace, construction trades, fishing, agricultural, manufacturing, health and technology were contacted via email and phone. Of those contacted, 20 agreed to participate in the interview either by phone or Zoom. The businesses interviewed included those in construction trades, fishing, forest products, grocery, healthcare, horticulture, hospitality, manufacturing, retail, staffing and tribal. Researchers made every effort to interview at least one business in each significant Washington business industry category. Of note, because aerospace is one of the top sectors in Washington State, researchers reached out to 19 various companies within that sector to schedule an interview. Unfortunately, none of these companies were willing to participate. As well, Strobel Consulting utilized contacts provided by SBE members with personal relationships in the aerospace industry and were still unable to recruit personnel from this sector for an interview.

Researchers also made every effort to be sure that the businesses interviewed comprised a variety of sizes, as well as regions in the state. As shown in Table 11, businesses from at least one industry were interviewed in each of the six regions. The majority of businesses interviewed were from the South Puget Sound (35 percent) region.

**Table 11. Industry Stakeholder Interview Participants**

# KEY FINDINGS

## RESULTS

Results are organized by the research questions that were developed for Year 3 by the Washington State Board of Education and Strobel Consulting. Each research question includes a summary of all items used to address the research question organized by the method of instrument (District Survey, Stakeholder Survey, Focus Groups, and/or Industry Stakeholder Interviews). Please note that each research question contains items from between 1 and 3 instruments.

Multiple choice items from the Stakeholder Survey were analyzed for differences by respondent type, gender, ethnicity and race. A response distribution by respondent type is included for each multiple choice survey item. For items in which a significant relationship exists via chi-square test of association by respondent gender, ethnicity and race, a response distribution is provided as well. Responses from open-ended questions were analyzed for themes and summarized in tables for frequency. Please note, while results from the District Survey are shared below, the overall sample was too small to be statistically representative of schools and districts in Washington. Given the large margin of error from such a small sample size, responses were not analyzed for differences in respondent type, gender, ethnicity and race.

Based on the categorical response options offered (Yes, No, Unsure), the only inferential test employed was the chi-square test of association to determine if statistically significant differences between groups were present. The test results for each item are not presented in text, but instead reported in full in Appendix F contained in Volume 2.

All findings and test results are included in the applicable appendices, both those found to be statistically significant and those that were not.

---

### WHAT CHANGES, IF ANY, SHOULD BE MADE TO THE EXISTING EIGHT PATHWAYS?

#### DISTRICT SURVEY

---

All educators responding to the district survey were asked if they thought changes should be made to the existing graduation pathway options. Of the respondents, about half (48 percent) agreed that changes should be made, while 16 percent were unsure.

**Figure 1. District Survey: “Changes need to be made to the existing graduation pathway options”**

Educators that responded yes regarding the need for changes to the current graduation pathways were invited to explain in their own words what changes they felt should be made. Respondents indicated that changes or accommodations should be made for small, rural and Alternative Learning Environment (ALE) schools as they do not have the resources to offer many of the pathway options.

*“For districts like ours, we need more resources or more ability to have specialty classes. We can't afford a full time art, world language, or business teacher, yet these are all requirements. And we cannot find part time people to do these jobs in small districts”. – District Administrator*

Another requested change was with regards to students receiving special education services needing a more accessible pathway. Respondents indicated that, given that the majority of the pathways are assessment based it is difficult for students receiving special education services to access these options and does not provide an accurate portrayal of their abilities. While the CTE pathway is a more accessible option, many schools and districts are unable to offer a sequence of classes that fit the pathway criteria. It was suggested that this would be easier for some schools if there was more flexibility in how the state classifies a sequence of CTE courses, or if the state allowed other occupational education courses not designated as CTE.

*“Almost every pathway requires a test or a high rigor course. That limits students on IEP's to CTE pathways, which does not always match their High School & Beyond plan. All of my GREW waivers this year were for students on IEP's.” – School Administrator*

And finally, educators expressed the desire to remove all the pathway requirements or keep the Smarter Balanced Assessment Consortium (SBAC) state assessment as the only pathway.

*“Our present system actually limits education and devalues the role of the teacher and administration. Solution? Keep the 24 credits and remove the pathways. Make the local school (not the state) solely responsible for local excellence and you will get the results you are looking for. If given the opportunity, local schools, teachers, and administrators, will create higher standards for themselves and they will live up to them!” - District Administrator*

## STAKEHOLDER SURVEY

---

Educators, parents, students and community members completing the Stakeholder Survey were also asked to describe any changes or modifications that should be made to the graduation pathways. Prior to this question, there was a set of questions that asked respondents to indicate how well each of the current graduation pathway options allow students to develop or demonstrate skills outlined in Washington's Profile of a Graduate. This was interesting as respondents were already thinking about the graduation pathways in relation to the Profile of a Graduate and went on to comment in this open-ended question that the current pathways do not allow students to demonstrate the skills outlined in the Profile of a Graduate (Cultivate Personal Growth and Knowledge, Solve Problems,

Communicate Effectively, Sustain Wellness, Embrace Differences/Diversity, and Master Life Skills/Self-agency) and changes should be made to the pathways if the goal is to have graduation pathway options that align to Washington’s Profile of the Graduate. While no specific suggestions were provided, respondents pointed out that assessments neither develop nor demonstrate the skills outlined in the Profile of a Graduate, nor do they develop emotional wellness or cultural diversity and that half of the pathway options are comprised of a standardized assessment.

*“In my opinion, none of the pathways promote diversity, cultural competency, mastery of life skills, or any type of wellness be it physical, mental, or emotional. If those concepts are supposed to be a part of the purpose of the pathways, then there needs to be a separate component to Graduation Requirements that supports this type of work... I think if the state wants to see students Sustain Wellness, Embrace Differences/Diversity, and Master Life Skills/Self Agency, then these need to be classes with credit attainment requirements for graduation, rather than trying to be met through the Graduation Pathways”. -Educator*

*“If the goals are to Cultivate Personal Growth and Knowledge, Solve Problems, Communicate Effectively, Sustain Wellness, Embrace Differences/Diversity, and Master Life Skills/Self-agency, then the current model grossly misses the mark. The current options are very focused on showing that a student's math and English skills are at a level that will allow them to succeed in a post-secondary school setting. It in no way shows that students are capable or help them improve as people that can be positive contributors in society outside of their ability to succeed in a classroom.” - Educator*

However, just as many responses indicated that the focus of the pathways and high school graduation should not be on sustaining wellness or promoting cultural diversity, but rather on pure academics. Some comments indicated that the focus should be on academic excellence and solid critical thinking skills instead of what respondents see as, “politically motivated agendas”. Similarly, the comments do not include any specific suggestions for changes to the graduation pathways.

*“Stop pushing activism and political agenda at the expense of our students. They need quality basic foundational education.” - Parent/Guardian*

The majority of responses indicated the need to focus less on college readiness and more on real-world skills such as financial literacy, life skills, and employability. Both nationally and within the state of Washington, direct postsecondary enrollment declined during the COVID-19 pandemic (undergraduate enrollment at public institutions declined by almost 14 percent in Fall 2020 compared

to Fall 2019<sup>10</sup>) with many high school students choosing to delay enrollment or not attend at all. Given that an increasing number of students are not enrolling directly in post-secondary education after high school, students need to be prepared to be successful in the workforce. Indeed, even students that do enroll in postsecondary education directly after school will likely require part time employment and they need the skills to be ready to do this. Comments suggested that the only pathway with the capacity to prepare students for the workforce is the CTE pathway, but that option is limited, as not all schools have CTE courses available that qualify as a sequence for the pathway or have courses relevant to the student's HSBP. It was suggested that the CTE option be expanded to allow online courses (for students that do not have options at the school they attend), and include internships and work experience. As well, it was suggested that CTE include more employability readiness skills, such as communication, resume writing, interview skills, and basic computer skills.

*"These graduation pathways are essentially based on standardized tests or credits that can be used to waive the requirement for those tests. It's reactionary and does not account for the different course, schooling, resource, or material needs that students have. There need to be clear course and test plans for each pathway, with their own distinct requirements that are suited to student goals. Example - Trades pathway, 4 Year University pathway, Community College pathway, Workforce pathway. They should have their own distinct requirements about courses taken, community service and job shadow hours, test taken, etc. These pathways were still created with standardized tests and 4-year universities as the default, which alienates our students while also preventing truly differentiated and responsive instruction and advising from taking place." – Educator*

*"CTE or project based pathways seem most suited to the goal of establishing readiness for success in college or career. Pathways were intended to match HSBP, but in effect have not been used that way. ASVAB and CTE sequence in particular are used as a last resort." – Educator*

*"Focus on academics, critical thinking skills, and jobs skills for STEM and tech fields, don't focus on college readiness. Focus on digital and financial literacy and real world skills." – Community Member*

It was also indicated that changes need to be made to make the pathways more accessible to students with IEPs, disabilities or limited English proficiency, as well as students in small/rural and alternative learning environment (ALE) schools. The majority of the pathway options are not equitable for special population students. While the CTE graduation pathway is the most likely option, there are

---

<sup>10</sup> Kwakye, I., Kibort-Crocker, E., and Lundgren, M. (2021). Understanding Postsecondary Enrollment Trends in Washington and How the COVID-19 Crisis Continues to Impact Students' Postsecondary Opportunities. Washington Student Achievement Council. <https://wsac.wa.gov/sites/default/files/2021-08-04-Postsecondary-Enrollment-Trends.pdf>

not sufficient CTE courses that meet pathway requirements available in all districts and that match a student's HSBP. As well, for small schools, many of the pathway options are simply not available due to a lack of resources including staffing, location, enrollment and funding. Suggestions included allowing flexibility for CTE program classifications and state assessment scoring changes.

*"Students who are good test takers are the ones who benefit from the available graduation pathways. Students who aren't good test takers and who would not be successful in an AP or dual credit pathway have very restricted options that are further restricted by the courses available at their high school. This is not equitable. Suggestions: Open up expanded criteria for state assessment that allows L2 Basic and LDA. Current regulations are not based on accurate data regarding cognitive ability and therefore disadvantage students receiving services. Add a pathway for students interested in the arts." – Educator*

Other comments were varied and suggested that:

- The SBA and other standardized testing requirements should be moved from the pathways;
- More information, support and resources should be provided to students, parents and schools regarding the pathway requirements;
- Pathways should be eliminated altogether; and
- No changes should be made to the graduation pathways.

Table 12 shows the range of themes expressed by respondents when asked to describe what types of changes were needed. Please note, individual responses may have covered more than one category.

*"I think the flexibility is important. It is too early to think about changes since COVID began right when we were really getting into this process." – Educator*

*"Assessments don't develop skills, and can't demonstrate skills in teamwork or wellness. They don't measure emotional wellness or cultural diversity. They don't measure real-life skills as much as they measure learned standards. An assessment measures past learning, not future capability." – Parent/Guardian*

Table 12. Stakeholder Survey Open-Ended Question: “Do you have suggestions for changing existing graduation pathways or adding additional graduation pathways to better address these skills?”

Suggestions for Changes to Grad Pathways	Count	Percent
<b>Focus on Real World Skills/Not College Readiness</b>	56	21%

## WHAT ARE THE PERCEIVED BARRIERS TO OFFERING ALL OF THE GRADUATION PATHWAYS AT BOTH THE SCHOOL AND DISTRICT LEVEL?

### DISTRICT SURVEY

---

District Survey respondents were asked to select the barriers (from a list) that keep their district or school from offering all of the graduation pathway options. Most respondents indicated that lack of resources, financial constraints and lack of certified teachers were their biggest barriers to offering all the graduation pathways. Many respondents also indicated “other” reasons, which included small district size, low student enrollment, space limitations, rural location, and limited options for alternative high schools.

Table 13. District Survey Open-Ended Question: “What are the barriers that keep your district from offering all of the graduation pathways at every school in the district?”

Barriers to offering all of the graduation pathways	Count	Percent
<b>Other</b>	11	18%
<b>Lack of Resources</b>	10	17%
<b>Financial Constraints</b>	9	15%
<b>Lack of Certified Teachers</b>	9	15%
<b>Lack of Post-Secondary Partnerships</b>	7	12%
<b>Other Staffing Issues</b>	5	8%
<b>Time Constraints</b>	4	7%
<b>Course/Bell Schedule</b>	3	5%
<b>Other Scheduling Requirements</b>	2	3%

Other: Small district size, low enrollment, space limitations, distance/location, limited options for alternative high schools

---

## HOW CAN DISTRICTS ELIMINATE OR REDUCE BARRIERS TO OFFERING ALL OF THE GRADUATION PATHWAYS?

### DISTRICT SURVEY

District survey respondents were asked to describe in their own words what changes would need to happen to eliminate the barriers that keep their districts/schools from offering all the graduation pathway options. Overall most respondents described needing additional resources for small/rural districts. This included funds to offer dual credit and CTE classes and/or assessments such as AP or SAT/ACT, funds for teaching staff, and funds to attract and compensate local partners. Many of the comments were related to CTE course offerings and described the need for CTE in ALE programs, more certified CTE Teachers, and access to online CTE courses. Other comments were related to funding and the need for funding for Bridge to College courses and Dual Credit classes.

*“One barrier that has always been a challenge for districts is CTE dual credit. The colleges seem to think we should pay their cost associated with the articulations. This is wrong as they receive Perkins money and should be partnering with us more.” – District Administrator*

*“While well intentioned, the barriers are actually the pathways themselves! Small rural schools do not have the resources to provide all eight pathway options, thus an inequity has been created between large schools and their rural counter parts. This creates discrimination against those who live in rural areas. As we are rural, we cannot attract teachers with the expertise needed to teach specialized AP and CTE classes.” – District Administrator*

DO ALL STUDENTS HAVE EQUITABLE ACCESS TO ALL OF THE GRADUATION PATHWAYS AND, IF NOT, WHAT ARE POTENTIAL STRATEGIES FOR REDUCING BARRIERS TO EQUITABLE ACCESS?

## DISTRICT SURVEY

District Survey respondents were asked if they agreed or disagreed with the statement, “All students in my district have equitable access to all the graduation pathways available in the district.” As shown, only 48 percent of respondents indicated all students had equitable access.

**Figure 2. District Survey: “All students in my district have equitable access to all of the graduation pathways available in the district”**

*“I am happy with the options available. In our district, they seem to cover the needs/interests of all students.” – District Administrator*

*“Many identified students are unable to access the pathways equally. There can be modifications/accommodations on the assessments but these can be hard to get approved for tests such as the ACT or SAT; or don't go deep enough on other tests such as the SBA. A student who has not finished Geometry level math (and doesn't qualify for the WA-AIM) is at a large disadvantage in the testing pathways. This leaves a student a pathway through a course like Bridges, Running Start, College in the High School, which are not accessible at the skill level of the student. Or the student can take a CTE pathway, but the school (especially a smaller school) may not have an appropriate set of CTE completers for the students chosen career field.” – School Administrator*

District survey respondents that disagreed that all students in their district had equitable access to all the graduation pathways were asked to describe potential strategies to reduce these barriers or to provide additional graduation pathway options that should be added to ensure that each and every student has equitable access to a graduation pathway option that supports their post-graduation goals. Responses varied, but overall the majority were regarding CTE courses and accommodations/pathways for students with IEPs. CTE related comments indicated there needed to be more flexibility in allowing non-CTE CIP coded occupational courses or CTE online classes from out of state to count toward a pathway. Comments related to students with IEPs pointed out that modifications or accommodations to assessments (such as the SAT/ACT or SBA) are hard to get approved and aren't enough for most students to pass. The need for an Internship/Apprenticeship pathway and specific pathway option for students with IEPs was reiterated. Additional comments indicated that students should have access to a pathway that fits their High School and Beyond Plan,

students need transportation to access Running Start classes and small districts that have a limited pool of certified/experienced teachers need more flexibility.

*“Teacher certification and expertise is a huge issue. We need the K-12 teaching certificate back. It would give small districts much more flexibility.” – District Administrator*

*“Our students on IEP’s are required to take specific courses to match their IEP minutes, which means they can’t access the CTE courses that could be used for a CTE pathway. Designing a pathway specifically for students on IEP’s would resolve this issue. For example, if a student completes 2 years of an Academic Lab or a Core Support class--that could meet a pathway since they are using strategies/supports to help them pass the core classes required for graduation.” – School Administrator*

*“We need meaningful career tech opportunities for all students. There are CTE labeled classes online that students could take, but because of CTE requirements, they can only be used as personal pathway courses and only if there is a WA certified teacher. There are nationally certified courses in RV tech for example that we cannot even use because even though part of the class could be done online in school, the school that offers it is out of state. It could lead to an internship or job after high school if we were able to use the program.” – District Administrator*

---

## SHOULD ADDITIONAL GRADUATION PATHWAYS BE INCLUDED AND IF SO, WHAT PATHWAYS SHOULD BE ADDED AND WHAT IS THE ASSOCIATED RATIONALE FOR DOING SO?

### DISTRICT SURVEY

---

District survey respondents were asked if additional graduation pathways should be added to the existing eight. Nearly half of respondents (44 percent) said “yes” additional graduation pathway options should be added.

**Figure 3. District Survey: “Additional graduation pathway options should be added.”**

Respondents that said additional pathways should be added (n=11) were then prompted to describe what those additional pathways should be and why. The majority of respondents described

a non-test pathway option that 1) is accessible to students in ALE programs; 2) is accessible to students receiving special education services; and 3) can easily be part of IEP/504 plans. Data from all three years of the project indicates that the graduation pathways are not accessible to students receiving special education services in most districts and that without adding additional graduation pathway options, the pathways will remain inequitable for a large portion of students. Similarly, longitudinal data across the three years of the project indicates that while the CTE sequence pathway is the most accessible non-testing based graduation pathway option, it is also a pathway that is consistently indicated as not being available at every school in every district. Indeed, even when CTE is available, the CTE classes that meet the sequence requirements of the pathway do not reflect the student's HSBP or even their interests. Other responses from Focus Group participants regarding which pathways should be added included an internship/apprenticeship pathway and additional options that could be readily implemented in small school districts and schools.

*"We focus on the three E's after high school, enrolled, enlisted, and employed. The current pathways more meet the first two, but other avenues definitely need to be opened up for 'employed'". – District Administrator*

*"We service students at two job corps sites. The students while at the job corps learn a trade (auto mechanics, masonry, nursing, computer tech, etc.). These students leave the site ready to enter the workforce, often times with certification and membership in a trade union. This should count as a pathway, but it doesn't. What message are we sending to those students?" – School Administrator*

District survey respondents were also asked if they had any other feedback related to the pathways that they would like to share. Responses indicated districts would like to have more local control and flexibility with regards to the pathways. Specifically, they felt that they needed to be able to create their own solutions based on school and district availability so that even small, underfunded, understaffed, rural districts would be able to offer equitable options for all of their students that fit with their High School and Beyond Plan.

*"It is very frustrating to know there is so much the small staff we have wants to do, but are unable to do it all and learn it all when we are wearing so many hats already." – District Administrator*

*"It's often a challenge to help students find pathways that truly match their High School & Beyond plan career goals. For example, it's hard to justify using an ASVAB score when the student has zero interest in going into the military. However, not allowing a student to graduate because their pathway doesn't align with their career choice is not acceptable either. There needs to be a compromise in this area." – School Administrator*

## STAKEHOLDER SURVEY

---

Stakeholder Survey respondents were also asked to describe what if any, pathways should be added. Most indicated that there needed to be an employability/apprenticeship/internship/community service pathway added. Indeed, much of the overall feedback received in the Stakeholder Survey, during Focus Groups and in Industry Stakeholder Interviews indicated that providing students with real world, hands-on work experiences was just as important, if not more, than tests and academics. Some of the educators participating in Focus Groups indicated they had students that were gainfully employed and helping to support their families while still in high school, but that they had difficulty meeting a pathway requirement and achieving a diploma even though they were already gainfully employed. They pointed out that if graduation pathways are intended to be a measure of post high school success, a student that has already achieved employment attainment should have a pathway available to them that reflects their success and give them a viable and relevant way to graduate.

*“I think there should be a work experience pathway where students who are working and gaining real life work experience should get credit since they are learning real world experience that can't be taught in a classroom. Many jobs will hire someone having more work experience than education.” – Parent/Guardian*

*“A pathway is needed that is built for students wanting to enter directly into the workforce. Employability skills, life skills for living on their own etc. These students are left out of the majority of the pathway options.” – Educator*

*“We need to do something to recognize students who are already in the workforce. I have seen students working far over the legal limit of hours for minors since the pandemic began. That should be recognized.” – Educator*

Other additional pathway suggestions from the Stakeholder Surveys and Focus Groups included an individualized pathway where students create their own, a fine arts/performing arts pathway, a portfolio pathway, a life skills pathway, and a multilingual pathway for biliterate/multilingual students.

*“Less is more. We don't need more graduation pathways; we need pathways that are flexible, responsive, and attainable. The reality is that students struggling to meet graduation requirements, in my experience, run through a battery of tests and specific courses, none chosen by the student, to hopefully meet the requirements in some manner. I'd like to think there is a better way to serve these students, and less requirements in fewer pathways would aid in transparency and give an opportunity for more meaningful discussions.” – Educator*

Table 14. Stakeholder Survey Open-Ended Question: “Do you have suggestions for adding additional graduation pathways to better address these skills?”

Suggestions for Additional Graduation Pathways	Count	Percent
<b>Employability/Apprenticeship/Internship Pathway</b>	38	53%
<b>Individualized Pathway</b>	12	17%
<b>Fine Arts/Performing Arts Pathway</b>	7	10%
<b>Portfolio Pathway</b>	5	7%
<b>Life Skills Pathway</b>	4	6%
<b>Multilingual Pathway</b>	3	4%
<b>Other</b>	3	4%

## DO THE GRADUATION PATHWAYS ALIGN TO PROFILE OF A GRADUATE?

Along with local input, the Washington State Board of Education developed the, “Profile of a Graduate” to serve as a guiding vision for the K-12 education system. This profile identifies the skills, knowledge, attributes, and competencies necessary for a successful transition to life after high school. The Washington State Profile of a Graduate will also be used to review state education policy, including graduation requirements. The profile states that a Washington state graduate: 1) cultivates personal growth & knowledge; 2) solves problems; 3) communicates effectively; 4) sustains wellness; 5) embraces differences/diversity; and 6) masters life skills/self-agency.

## DISTRICT SURVEY

District Survey respondents (district and school administrators) were asked whether they agreed or disagreed with the statement, “The graduation pathway options my district currently offers align to Washington’s Profile of a Graduate”. As shown the majority (67 percent) of respondents agreed.

Figure 4. District Survey: “Please indicate whether you agree or disagree with the following statement: “The graduation pathway options my district currently offers align to Washington's Profile of a Graduate.”

## STAKEHOLDER SURVEY

Stakeholder Survey respondents were asked to indicate if they were familiar with Washington’s Profile of a Graduate. Overall, 44 percent of respondents said that they were familiar. As shown, there was variability in responses by respondent type. As expected, Educators, followed by Recent High School Graduates were most likely to be familiar with this concept, while Community Members were least likely to be familiar with the Profile of a Graduate. Surprisingly, only 62 percent of educators were

familiar with this statewide vision. No significant differences were observed for answers to this question by respondent gender, race or ethnicity.

**Figure 5. Stakeholder Survey: “Are you familiar with the Profile of a Graduate?” by Respondent Type**

The Profile of a Graduate states that the, “purpose of a high school diploma is to declare that a student is ready for success in postsecondary education, gainful employment, and citizenship, and is equipped with the skills to be a lifelong learner.” Stakeholder Survey respondents were asked to indicate how well the current diploma and its components fulfill that purpose. While most respondents (65 percent) agreed that the diploma fulfills that purpose moderately well to very well, fewer respondents agreed that components of the diploma did. Of the diploma components, the High School & Beyond Plan was the lowest rated in terms of the fulfillment of its purpose.

Each of the items was analyzed for differences in response by respondent type and demographics. Significant differences were observed by respondent type for all items except Credit and Subject Area Requirements. Significant differences were observed by respondent demographics (gender, ethnicity and/or race) for all items. See Appendix F (Statistical Tables) for the statistical results of these items.

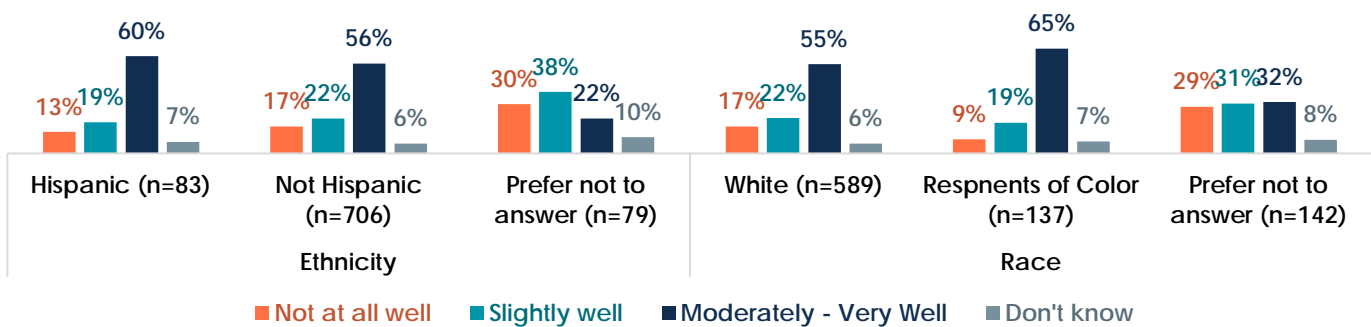

Figure 17. Stakeholder Survey: “How well does the current diploma and each of its three components fulfill the following purpose - Graduation Pathway Options?” by Respondent Race and Ethnicity

Stakeholder respondents were asked to rate each of the 7 pathway options (excludes the combination pathway option) and its ability to develop or demonstrate the skills outlined in Washington’s Profile of a Graduate. As shown in tables 15-21, the highest rated pathways were the

CTE Sequence and Dual Credit Courses Pathway. Specifically, over 70 percent of respondents indicated that these pathways allowed students to develop or demonstrate cultivation of personal growth and knowledge, and problem solving skills moderately well to very well. In addition, over 60 percent of respondents indicated these pathways allowed student to develop or demonstrate communication and life skills. This is not surprising, as both Dual Credit and CTE courses have the potential to give students an opportunity to receive post-high school training and teach skills that can be applied to life post high school.

Each of the responses were analyzed for differences among respondent types and respondent demographics. Significant differences by respondent type, gender, and ethnicity were observed for all of the following items regarding the State Assessment Pathway. Significant differences by race were also observed for all items except for, Cultivates Personal Growth and Knowledge.

**Table 15. Stakeholder Survey: “To what extent does the State Assessment Pathway (see definition below) allow students to develop or demonstrate the following skills?”**

State Assessment Pathway	Moderate -Very Well					
	Overall	HS Student	Recent HS Grad	Parent or Guardian	Community Member	Educator
<b>Cultivates Personal Growth and Knowledge</b>	46%	61%	65%	47%	60%	32%
<b>Solves Problems</b>	47%	66%	73%	47%	57%	35%

## FOCUS GROUPS

Focus Group Participants were also asked if they thought the current graduation pathway options supported the Profile of a Graduate. Participants indicated they did not feel the pathways reflected the Profile of a Graduate. Specifically, because most of the graduation pathway options require a standardized test as part of their fulfillment requirements, they are not reflective of the Profile of a Graduate which specifically seeks to identify skills, knowledge, attributes, and competencies necessary for a successful transition to life after high school. Focus Group participants felt that being able to pass a test, “does not reflect or predict post-secondary success, unless a student is trying to pass an exam for a specified certification, we don’t normally take tests in real life”. The majority of

Focus Group participants were also in agreement that the graduation pathway options are largely inequitable to special education students, students in small rural school districts, and students in ALE schools, and therefore not reflective of the Profile of the Graduate, which should encompass all students in the Washington K-12 education system.

As previously indicated, it is difficult for many students with IEPs and 504 plans to get certain accommodations on the various exams. So while they are able to utilize all the tools and supports that they have been taught to use through their special education plans and to pass their ELA or math classes, because they cannot utilize those on the majority of the graduation pathway option related assessments, they are unable to pass the exam associated with those graduation pathways. Because of this the current graduation pathway options aren't reflective of the actual skills students have, even though these are skills that can absolutely benefit their successful achievements beyond high school. Given that the goal of a Profile of a Graduate is to ready students for success post high school, the pathways should reflect the value of those skills.

*"I've got a specific student right now, who will be a senior next year, and she passed her ELA and she hasn't passed the math yet. But she's just passed geometry with an A, but she had to work her tail off, and use supports and all that kind of stuff. So she can do it. But it just doesn't show up on the SBA." – Focus Group Participant*

*"Well, I think when you said, demonstrating skills, knowledge and competency to transition out of high school, I think if the goal is for them to demonstrate that they have learned what we say they need to learn to graduate and move on, then we need to honor how we have taught them to use tools and supports." – Focus Group Participant*

Some participants shared examples of specific students they were working with that were already fulfilling the Profile of a Graduate with successful employment and community membership. However, even though they were reflecting the Profile of a Graduate, they were unable to fulfill a graduation pathway requirement due to their inability to pass one of the assessments without supports.

*"I have a student who I just did a waiver for grad pathway because she didn't meet the math grad pathway...But she, for the past two years, has sold her artwork at local art fairs. She has her artwork in a store in Anacortes, and has had it for a whole year. She has done costuming for local community theaters and is currently under demand for hire for additional creative projects. She's shooting out into the world and has already developed an actual position in community for herself... And it is difficult to think that at some point in time that she wouldn't be able to graduate because there isn't a waiver." – Focus Group Participant*

The very small, rural and ALE schools are limited in the graduation pathway options they are able to offer. Specifically, most are unable to offer the CTE or Bridge to College pathway, which are the most

likely options for students that are unable to pass the more assessment based pathways. This is important to note as in the Stakeholder Survey both the CTE and Dual Credit (Bridge to College) pathways were the highest rated in terms of supporting the skills outlined in the Profile of a Graduate. If these options are not available to all students, the pathways cannot accurately reflect the Profile of a Graduate.

*I work with a lot of very small districts that have 80 students in K-12 and they don't have the capacity to do the CTE pathways. I also have some that are trying to do Bridge to College but its not designed to do online or an ALE setting so it doesn't work. When we think of additional pathways the first audience that needs to be front and center is our really small, rural districts, which 2/3 of our districts meet that criteria which is not insignificant. – Focus Group Participant*

---

## HOW IS THE HIGH SCHOOL AND BEYOND PLAN BEING IMPLEMENTED?

The High School and Beyond Plan (HSBP) is a process for students, parents, and teachers to guide students through high school and think about their future. Plans are personalized and designed to help students set, visualize, and work to achieve goals. Along with Credit and Subject Area Requirements, and Graduation Pathway Options, Washington students must complete a HSBP to achieve a high school diploma.<sup>11</sup> Each district has the flexibility to approach the requirement in their own way.

## STAKEHOLDER SURVEY

---

Stakeholder Survey respondents were asked if they were familiar with the High School and Beyond Plan. The majority of all educators (88 percent) were familiar with the High School and Beyond Plan. While this was a high percentage, it is somewhat surprising that 12% were unsure or not given that this is a graduation requirement and all HS teachers and administrators should be familiar with the requirement. Only about half (58 percent) of the Recent High School Graduates and current High School Students (48 percent) were familiar with the High School and Beyond Plan which is also surprising given that this is a graduation requirement and every high school student should be completing this plan. The responses from this item would indicate that the HSBP is not being implemented in all high schools and districts in any meaningful way if not every teacher, administrator and high school student is familiar with the HSBP. Responses for this item were analyzed for differences by respondent type and demographics. Significant differences were observed for this item by respondent type, gender, race and ethnicity, see Appendix F.

Figure 19. Stakeholder Survey: “Are you familiar with the High School and Beyond Plan?” By Respondent Gender

Figure 20. Stakeholder Survey: “Are you familiar with the High School and Beyond Plan?” By Respondent Ethnicity and Race

## FOCUS GROUPS

---

While Focus Group participants were not directly asked how the HSBP was implemented in their respective districts, a few shared additional information about how this process is completed. For the most part, many participants indicated that the HSBP was filled out senior year as a, “check the box” type item that was completed because it was a requirement, but not used in an informative or relevant way.

One educator indicated that their district had done a great job of implementing the HSBP and had a process in place to make it meaningful for students. Freshmen in this particular district have to take a career exploration class, where they start their HSBP. This allows students to build a career path in their first year of high school, giving them greater opportunities to reevaluate and make customized changes to their plan in subsequent years.

---

## WHAT IMPROVEMENT COULD BE MADE TO THE HSBP TO MAKE IT A BETTER TOOL FOR STUDENTS TO PLAN THEIR FUTURE AFTER HIGH SCHOOL?

### STAKEHOLDER SURVEY

---

Stakeholder Survey respondents were asked to describe what if any improvements could be made to the High School and Beyond Plan to make it a better tool for students to plan their future after high school. Most of the responses indicated that more information needed to be provided to students and parents about the HSBP early, so that they had an opportunity to really utilize the tool for its intended purpose. Based on collected data, some students wait until their senior year to complete their HSBP and at that point it is considered a, “check the box” activity and not completed in any meaningful way.

*“The High School and Beyond Plan is kind of a check the box thing for students...something that they have to do but that doesn't really mean anything. Students need to have earlier opportunities to connect with subjects and skill development pathways that lead to jobs.” – Educator*

*“The communication surrounding the high school and beyond plan needs improvement as a whole. Students know the work is required to graduate but don't at this point connect it to helping guide their future. ‘It's a waste of time’, is often heard from students and parents don't understand the purpose besides a grad requirement.” – Educator*

*“Provide parents/students with the options as freshman. I had to figure so much out with my first and it would have been helpful to get input from real people that took different paths and have more opportunities to gather information(printed and verbal).” - Parent/Guardian*

Respondents also suggested that the HSBP would carry more meaning if it was a more individualized process in which students could work directly with advisors and parents to complete the tool in a thoughtful manner. As well, it was suggested that the tool be completed as part of a separate class, or built into core subject classes so that students could complete the tool under direct instruction. Respondents communicated that this would likely require additional funding and resources from the state to ensure that staff received adequate professional development to implement and create meaningful lessons around the HSBP.

*“On the school's end, make it embedded in multiple areas of a students' experience, not just a checklist item. We need to build the value with students and staff.” – Educator*

*“Educating staff on the importance of it and how valuable it can be in guiding students towards their post-secondary pathway.” – Educator*

Regarding the HSBP platform itself and the tools included, it was suggested that a consistent statewide HSBP platform and data system would be beneficial for housing associated information. This would also provide an opportunity for parents and advisors to access and assist students with their plans. Furthermore, respondents indicated that students transferring in and out of different high schools would be able to continue with their current HSBP instead of restarting at every new school if there were a statewide system to house individual HSBPs. They also indicated that the HSBP seemed to be geared specifically towards college bound students and that the careers and pathways suggested for students were very, “college heavy”. Additional feedback indicated that the HSBP tool be revised to include a wider variety of career and educational paths beyond attending a 4 year college or university.

*“The tool itself is kind of clunky. My oldest was having trouble figuring out how to make it do what she wanted. It also seems to push her into a very narrow set of future goals, rather than showing her all of her options.” – Parent/Guardian*

*“Consistency in implementation, shared accountability and data collection, a process that ties completion to key milestones that are achieved with the help of a school counselor and other educators who serve as supportive guides to students.” – Community Member*

Other suggestions for improvements to the HSBP to make it a better tool to plan for after high school included integration of work and life skills, community mentorship opportunities, alignment with special education services, beginning the HSBP in middle school, and including more resources for applying for scholarships and financial aid.

*“Start earlier in middle school. Get community buy in and create living document that can be assessed regardless of living circumstances. Would also benefit Foster Care members.” – Community Member*

*“There has been too much focus on four year universities. Students should know more about two year college programs, apprenticeship programs and financial information about managing your life once you start working.” – Community Member*

**Table 22. Stakeholder Survey Open-Ended Question: “What improvements could be made to the High School and Beyond Plan to make it a better tool for students to plan their future after high school?”**

<b>HSBP Suggestions for Improvement</b>	<b>Count</b>	<b>Percent</b>
<b>More Information Provided to Students and Parents About HSBP</b>	84	18%
<b>Individualized/Continuous Process Completed With Advisors and Parents</b>	57	12%
<b>Have a Separate HSBP Class or Integrate Into Core Subject Classes</b>	52	11%
<b>Other</b>	46	10%
<b>Provide More Diverse Information on Skills, Sectors, and Education Programs</b>	42	9%
<b>Integrate Work and Life Skills</b>	39	8%
<b>Statewide Platform and Data System that is Student/Parent/Teacher Accessible</b>	34	7%
<b>Provide Resources and Funding to Support Implementation in Every District</b>	33	7%
<b>Discontinue HSBP Graduation Requirement</b>	24	5%
<b>No Changes Needed</b>	16	3%
<b>Include Community Mentorship Opportunities</b>	13	3%
<b>Align Special Education services with HSBP / Increased Accessibility and Relevance for Sped Students</b>	13	3%
<b>Start HSBP in Middle School</b>	12	3%
<b>Provide More Resources for Applying for Scholarships/Financial Aid</b>	4	1%

## FOCUS GROUPS

Educators participating in Focus Groups also had a lot feedback with regard to the HSBP. Specifically, they felt that for many students the HSBP is completed senior year as a, “check the box” requirement and therefore lacks meaning. Because the state offers flexibility with how and when the HSBP is completed, many districts and schools struggle to implement the HSBP in a way that is useful and relevant to students. Some districts see it as an “unfunded mandate” and don’t have the resources to make it successful. As well, Focus Group participants indicated that there isn’t “buy-in” from parents and teachers in some districts, because for the most part they are not informed about the HSBP and therefore do not understand or see the value of it.

It was suggested that if the state provided more support and training on how best to incorporate the plan and its activities, teachers would be better prepared to implement and follow through with the various activities. As of now, there isn’t a consistent point person for coordinating the implementation of the HSBP across the state. Survey participants expressed that if there were a designated point

person at the school level who could lead the process using a template and timeline supplied by the state, this would help create equity across the state. As well, it was suggested that the state set a consistent schedule for implementing the HSBP to increase the likelihood that all students would complete certain HSBP benchmark activities each year of high school instead of waiting until the last minute of senior year and just checking a box.

*“The idea of recommending a point person by position in the school to lead the work, providing a program design, sort of template timeline, and that like in seventh grade, these should be done and in eighth grade, this should be done in ninth grade 10th grade, giving broad strokes with latitude for implementation.” – Focus Group Participant*

Educators also conveyed that they are concerned that the HSBP isn't equitable, especially for students with disabilities and/or those who are receiving special education services. It was indicated that the activities associated with the HSBP, especially the career guidance activities, are not designed for personalization and therefore don't capture an accurate future outlook for students with disabilities. A deeper level of customization is needed in order for the HSBP to be meaningful and relevant to all students regardless of what their future might look like.

*“Personalization for diversely, neurodiverse people, the cognitively impaired students who it's inappropriate to put them on a college bound, or even some cases, post education, post high school education, or employment. We do that work in special ed, we have a plan, we reach out to community vendors we job embedded coaches and training. But the high school beyond plan doesn't really capture that in a clear way.” – Focus Group Participant*

As indicated previously, while some educators reported that their districts had done a great job of implementing the HSBP and had a process in place to make it meaningful for students, there was also feedback highlighting that even the best laid post high school plans mean very little if there aren't any options or supports in the district to actually allow students to follow through with their plan.

*“I think the HSBP is a super valuable process and we're going through this organic planning process, with like, all these excellent conversations, and then connecting to the community, and doing this job, and what can you do in this job to build on this job, and everyone [students] is all in. It's just that the endpoint is like, okay, never mind all that. Because those things that you're actually doing, don't count for this endpoint.” – Focus Group Participant*

---

WHAT IMPROVEMENT COULD BE MADE TO THE HSBP TO MAKE IT A BETTER TOOL FOR STUDENTS TO MAKE DECISIONS ABOUT COURSES, GRADUATION PATHWAY OPTIONS, OTHER ACADEMIC AND CAREER LEARNING ACTIVITIES?

## STAKEHOLDER SURVEY

---

Stakeholder Survey respondents were asked to describe the improvements that could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about academic and career learning activities. Respondents indicated that the HSBP should be individualized per student needs and continuously reviewed and revised with advisors, students and parents. Similar to responses regarding how to make the HSBP a better planning tool for life after graduation, respondents shared that students only complete the HSBP as a checklist item during the senior year and that the HSBP would serve as a better academic planning tool if it was something that students started as early as middle school and revisited, at least annually, under advisement from a counselor or teacher. It was suggested that the HSBP should be a “living” document that is updated and reevaluated consistently to reflect a student’s changing needs and interests.

*“Just having a student upload a document is not going to help them make decisions. It needs to be a conversation and a living document that changes over time depending on their interests and needs.” – Educator*

*“HSBP needs to be visited regularly with good data tracking for students so they become invested in their education and know all that graduation entails.” – Educator*

*“At my child’s school, this plan is done 6 weeks prior to graduation, so it does nothing to help them with pathway options.” – Parent/Guardian*

Some stakeholders suggested that to make the HSBP a viable planning tool, there should be a separate, “High School and Beyond class” or creating it should be more incorporated into a core subject class. Collected data indicated this would help students to make the tasks and activities completed as part of the plan more meaningful and provide a better understanding as to the relevance beyond high school. Additionally, respondents suggested this would also serve to integrate the plan with course selection, graduation pathways, extracurricular activities, and post high school plans. As well, it was indicated that the HSBP should be housed in a consistent statewide digital platform so that advisors, teachers, parents and students could access it regularly to review and update the HSBP as needed. Having a consistent platform across the state would also benefit students transferring in and out of various high schools and help to keep them from losing progress they had made in this endeavor.

*“Have the schools make it part of a required senior class or a stand along required class. Create specific activities / lessons for students to complete instead of saying ‘go to this website and complete some aptitude test.’” - Educator*

*“It would be great if all core content areas had to create assignments tied to the HSBP annually. This would ensure the HSBP is a living tool students use to reach post-secondary goals.” – Educator*

*“Require a senior class and a middle school class that focuses on students on their future with student generated artifacts that are stored in a central system that students and advisors can access from any district throughout their secondary education experience. School transfers lose a majority of this work leaving our most vulnerable students without any future orientation.” - Educator*

There were a number of responses with regard to the career exploration quiz and education finder features that students have to complete as part of the HSBP. Much of the feedback indicated that there should be more diverse information on the skills, sectors, and education programs suggested to students. Respondents commented that they felt this feature was geared toward careers that required college education and that the program needed to take into account that not every student intends to start a career that requires a college degree. As well, many parents conveyed that the entire HSBP process should be more personalized to mitigate career suggestions and education paths well beyond their child’s general capabilities.

*“Currently feels very college focused and until the cost of college drops, students aren't interested. More emphasis is needed on jobs and skills that require only a 2-year degree or no degree.”- Educator*

*“Encourage students to explore each of the pathways and weigh out pros and cons according to their lifestyles and interests.” – Recent High School Graduate*

Other comments included dropping the HSBP as a graduation requirement, the need for resources from the state to support a more consistent implementation of the HSBP in every district, a better integration of work and life skills, inclusion of community mentorship opportunities, alignment with Special Education, and providing more information to parents early on so they have a better understanding of the HSBP and can be more involved with the process.

*“Higher awareness, for both students and parents. Many students are learning their options from other students, and even when they want to try something different, parents may not recognize a valid opportunity.” – Educator*

*“Teachers need a ton of PD on it. I teach a college class on the HSBP to teachers. The number one comment I get is: “now that I understand this, I am going to be way more involved in making sure it gets done right”. This just did not enough PD to be rolled out for teachers to do.” – Educator*

Table 23. Stakeholder Survey Open-Ended Question: “What improvements could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities?”

Suggested HSBP Improvements	Count	Percent
<b>Individualized Continuous Review Process with Advisors, Students and Parents</b>	69	20%
<b>Provide More Diverse Information on Skills, Sectors, and Education Programs</b>	54	15%
<b>Integrate with Course Selections, Grad Pathways, Extracurricular Activities, etc.</b>	39	11%
<b>Have a Separate HSBP Class or Integrate Into Core Subject Classes</b>	28	8%
<b>Provide Resources and Funding to Support Implementation in Every District</b>	28	8%
<b>Drop the HSBP Requirement</b>	27	8%
<b>Integrate Work and Life Skills</b>	26	7%
<b>Statewide Platform and Data System that is Student/Parent/Teacher Accessible</b>	23	7%
<b>Other</b>	16	5%
<b>Start HSBP in Middle School</b>	13	4%
<b>Include Community Mentorship Opportunities</b>	12	3%
<b>Align Special Education with HSBP</b>	8	2%
<b>Provide More information to Students and Parents About HSBP</b>	8	2%

## FOCUS GROUPS

Educators participating in Focus Groups suggested that the HSBP would be more readily utilized as a decision making tool if additional guidance and supports were provided by the state. And that additional state level guidance should include a plan for integrating the HSBP into core classes, or as part of a career exploration class for all freshmen, so that students can begin exploring career goals, identifying interests, and creating a four year plan at the start of their high school career, versus at the end. More specifically, respondents indicated that students need an opportunity to learn more about the graduation pathway options in general, followed by guidance in creating a plan that is supported by one of the graduation pathway options and is driven by their skills and interests and not based on what they can, “pass.” They also expressed a need for parents to be included in opportunities to learn more about the HSBP and the graduation pathway options so they are poised to actively engage and advocate for their children over the course of their high school journey.

*“I think where my issue is, with the pathway of the graduate is the rules themselves are vague about who’s responsible for it. Under the guise of local control, you have these great pathways, but it’s like ‘here school do this” and in some places, it’s a counselor, some places, it’s a dean, some places, it’s this just person who has historically always done that. And so you get inequity in the systems, even within our school districts, let alone district to district, because the pathways are very common sense to me, and they’re flexible, and there’s options. No one takes ownership of it the same way from school to school or district to district. And so it that there’s just sort of breeds inequity,*

*there's not an assigned point person. And if we're not given guidance, then it becomes the path of least resistance." – Focus Group Participant*

*"I would also suggest that someone explores how do you integrate this into ELA and social studies classes, least some of the work ...and then write a write a paper about that. And it would be relevant to either contents to support state standards...So I think a lot of the activities would be very integrated." – Focus Group Participant*

Focus Group participants were very clear that it is paramount that the available graduation pathway options actually reflect the future plans of students if they are to be of any value as a decision making tool or impetus for selecting course work and activities that give agency to their own plans for the future. Participants were direct in their desire to see students utilizing a graduation pathway option relevant to them, rather than wasting time going through the process of creating a HSBP only to have to end up picking a graduation pathway based on their ability to meet the requirements of a graduation pathway option with no value beyond checking a box.

*"So it's possible for our system to read these documents as, 'well we're going to try to fit you in the first slot. And if you don't fit, that's okay. We'll try shoving you in the next slot, we're going to keep shoving you into a slot until we find one that fits.' That is inherent in the system, it's breeding these inequities. If we really are truly serious about personalization and a student being the center of making the choice, then we can't have a default choice that's made for a student. How do we ensure implementation that guarantees the student agency and choice throughout the process? And I think the High School and Beyond Plan could be a central document in that, but there's a lot more work to be done around how it's being used." – Focus Group Participant*

*"I think we need a mastery based learning pathway opportunity for kiddos to really put the kid in the center and wrap ourselves around as a system of support. And then let them choose their own adventure through their high school experience, in a way where high school can be purposeful it can have meaning in a way that very few of our students get to experience." – Focus Group Participant*

---

ARE THE GRADUATION PATHWAYS RELEVANT TO STUDENTS AND HOW COULD THEY BE MORE RELEVANT?

## STAKEHOLDER SURVEY

---

The Stakeholder Survey included multiple "trigger" questions in which a "Yes" response would trigger additional questions within the survey. The question "Are you familiar with the current high school graduation pathway options available in the state of Washington" triggered additional questions about the graduation pathway options and their relevancy. Overall 64 percent of the respondents, and nearly all educators (91 percent) were familiar with the current high school graduation pathway

# WA Graduation Pathway Options – Stakeholder Feedback Project

options. Only half (50 percent) of the Recent High School Graduates and current High School Students (47 percent) were familiar with the graduation pathway options. Responses for this item were analyzed for differences by respondent type and demographics. Significant differences were observed for this item by respondent type, gender, race and ethnicity, see Appendix F for this item’s full statistical tables.

**Figure 21. Stakeholder Survey: “Are you familiar with the current high school graduation pathway options available in the state of Washington?” By Respondent Type**

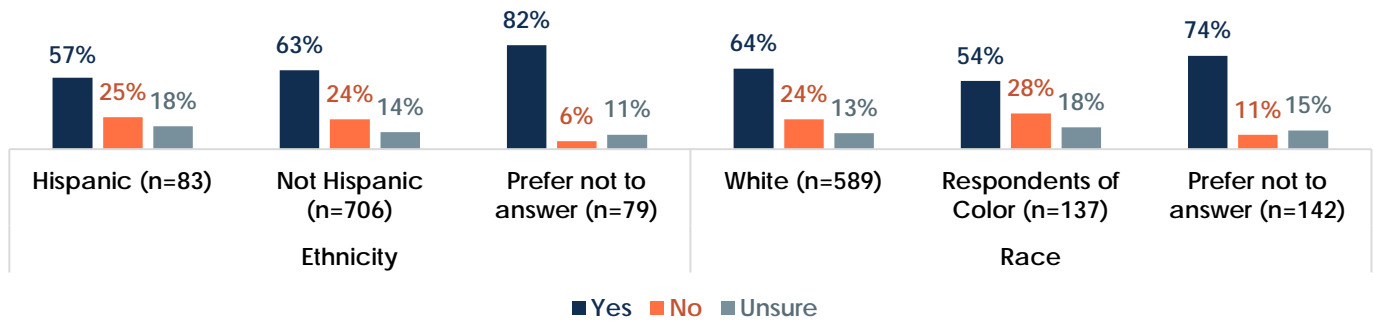

**Figure 22. Stakeholder Survey: “Are you familiar with the current high school graduation pathway options available in the state of Washington?” By Respondent Gender**

# WA Graduation Pathway Options – Stakeholder Feedback Project

Figure 23. Stakeholder Survey: “Are you familiar with the current high school graduation pathway options available in the state of Washington?” By Respondent Ethnicity and Race

Stakeholder Survey respondents that indicated they were familiar with the current graduation pathway options were asked to indicate if the graduation pathway options were relevant to all students. Responses varied significantly by respondent type, with current high school students and recent high school grads being more likely to indicate the current graduation pathway options were relevant versus educators, community members and parents. As shown, a little over half of high school students (57 percent) and recent high school graduates (54 percent) answered “yes” while approximately half (46 – 59 percent) of all other respondent types answered “no”.

Figure 24. Stakeholder Survey: “Are the current graduation pathway options relevant to all students?” by Respondent Type

Significant differences were also detected in response to this item by gender and ethnicity. Males were more likely to indicate “yes” the pathways are more relevant and Hispanic respondents were more likely to indicate “unsure”.

Figure 25. Stakeholder Survey: “Are the current graduation pathway options relevant to all students?” by Gender and Ethnicity

Stakeholder respondents that indicated the graduation pathways were not relevant to all students were invited to share in their own words how the options could be more relevant for all students. The majority of comments were regarding the lack of equity in the pathways for all types of students and all types of schools in all areas of the state. Communicating that because the pathways are not equitable or accessible to all students in all schools, they cannot be a relevant measure of high school completion.

The lack of equity for IEP/504, Special Education, English Language Learner and Unconventional students was specifically discussed along with the need for additional options within the pathways for these students. Currently, the only pathway options available to students with difficulties taking tests is the CTE sequence, which is limited or unavailable at many districts and schools in the state. Respondents reiterated the need for additional options or a specific pathway option for IEP/504, Special Education, English Language Learner and Unconventional students, as the current options are limited and therefore inequitable. With regards to CTE, it was also noted that there needs to be more flexibility in terms of which courses count towards a CTE sequence and the CTE pathway.

Not all schools in the state are able to offer all of the graduation pathway options due to a number of reasons, including school type (ALE schools), funding, staffing, space and size. Most schools in smaller/rural districts are unable to offer the CTE pathway, which as previously indicated, is the only non-test option for students with IEPs and special needs.

Responses indicated that the pathway options are too focused on high level college bound students as SAT/ACT, dual credit courses, transition courses, and AP/IB/Cambridge options are really only accessible to those students. Students not planning to pursue post-secondary education only have the SBA, CTE and ASVAB options available. As previously noted, these options may not be available in all schools and therefore they cannot be equitable to all students.

*“Increase focus on students who are entering the workplace directly rather than military or college. Widen the possibilities for them to demonstrate readiness and 21st Century skills. Financial Literacy aptitude should be a hard*

# WA Graduation Pathway Options – Stakeholder Feedback Project

*requirement. The state SBAC test is not a relevant indicator for most of our students". – Educator*

*"Students need more non-test graduation pathway options, including one that values a job immediately after high school that falls within a student's long-term plans". – Parent/Guardian*

Other comments regarding the relevancy of pathways indicated that:

- The pathways are used as a box to check and aren't actually used for any meaningful purpose;
- More support and information needs to be provided to schools, students and their families to fully utilize and understand the pathways; and
- Additional pathways should be created.

The additional pathways suggested included trades/apprenticeship/work experience, custom/student created, life skills, project/portfolio, and fine arts/creative pathways. Table 24 shows the range of themes expressed by respondents when asked to describe how the pathways could be more relevant to all students. Please note, individual responses may have covered more than one category.

**Table 24. Stakeholder Survey Open-Ended Question: "How could the current graduation pathway options be more relevant for all students?"**

	Count	Percent
<b>Options for Special Education/IEP/EL/Unconventional Students</b>	68	19%
<b>Equity for All Students</b>	47	13%
<b>Focus less on only high level, college bound students</b>	37	10%
<b>Other</b>	34	9%
<b>Add Trades/Apprenticeship/Work Experience Pathway</b>	33	9%
<b>Equity for all schools</b>	26	7%
<b>Add Custom/Student Created Pathway</b>	21	6%
<b>Flexibility for CTE/Additional CTE Options</b>	24	7%
<b>Add Life skills Pathway</b>	15	4%
<b>Provide more support/information for schools/districts/students/parents to implement/understand pathways</b>	15	4%
<b>Remove Pathway and/or HSBP requirements</b>	13	4%
<b>Use pathways as a meaningful tool for planning</b>	11	3%
<b>Add Project Based/Portfolio Pathway</b>	9	2%
<b>Add Fine Arts/Creative Pathway</b>	9	2%
<b>Flexibility with the HSBP</b>	2	1%

*“Provide resources to ALL school districts, including rural districts, to give a wider array of options. Create more flexibility for teaching staff to teach out of area. This will enable more options and individualized learning.” – Educator*

*“Too many pathways focus on only test taking. The CTE pathway is great, but it is not equitably accessible for students in ALE or small schools.” -Educator*

Current high school students that indicated they were familiar with the current graduation pathway options were asked if the options were specifically relevant to them. As shown, the majority (80 percent) answered “yes”. No significant differences were observed for answers to this question by respondent gender, race or ethnicity.

**Figure 26. Stakeholder Survey: “Are the current graduation pathway options relevant to you?”**

Students that indicated the graduation pathway options were not relevant to them were asked to describe what would make them more relevant. Because of the very small number of “no” responses and the lack of viable open response data, a summary to this item cannot be included.

All Stakeholder Survey respondents were asked to rate the importance of the following skills and attributes in the current workforce. As shown, the majority of respondents agreed that communication skills (96 percent), problem solving skills (93 percent), collaboration skills (91 percent) and critical thinking skills (91 percent) were among the most important. The skill that was rated as being the least important was test taking (25 percent), which is notable given that half of the current pathway options involve a standardized test. It was also indicated that a two year degree (29 percent), four year degree (27 percent) and foreign language skills (30 percent) were not as important.

Responses to this question were analyzed for significant differences by respondent type and demographics. The following figures display the responses by respondent type and demographics, *if significant differences were observed*. Significant differences were observed by respondent type for all items except Work Experience, Creativity & Innovation, and Leadership. The items in which significant differences were observed by respondent demographics (gender, ethnicity and/or race) were Problem Solving Skills, Four-Year Degree, Timeliness, Two-Year Degree, Work Experience, Math Skills, Technical Certification, Test-Taking, Flexibility, English Language Arts Skills and Foreign Language. See Appendix E for the full response distribution and Appendix F for the statistical results of these items.

In an effort to obtain additional information about what prepares students for success after school, the Stakeholder Survey asked respondents whether they agreed or disagreed that earning a high school diploma prepares a student for success after high school. Overall, 66 percent of respondents agreed that a high school diploma does prepare a student for success. Analysis of this item by respondent characteristics showed significant differences in respondent type (Community members) and respondent gender. See Appendix F (Statistical Tables) for the statistical results of this item.

Figure 63. Stakeholder Survey: “Earning a high school diploma prepares a student for success after high school” by Respondent Type

# WA Graduation Pathway Options – Stakeholder Feedback Project

Figure 64. Stakeholder Survey: “Earning a high school diploma prepares a student for success after high school” by Gender

Stakeholders were also asked whether or not solid employability skills are necessary for post high school success. As shown, the majority of respondents (89 percent) agreed. However, there was some variation in responses with significant differences detected by respondent type, gender, and race. Current high school students and recent high school grads were less likely to agree with this statement than were educators, parents and community members. As well, respondents of color and males were less likely to agree with this statement, see figure 44.

Figure 65. Stakeholder Survey: “Solid employability skills are necessary for success after high school” by Respondent Type

Figure 66. Stakeholder Survey: “Solid employability skills are necessary for success after high school” by Race and Gender

# WA Graduation Pathway Options – Stakeholder Feedback Project

All Stakeholder Survey respondents were asked to indicate whether or not WA students needed more, less, or already received the right amount of various learning opportunities. Most respondents indicated that WA students should be provided with more direct experiences that connect to work (80 percent) as well as opportunities to work on real-world problems (77 percent) and employability skill practice (76 percent). About half of all respondents felt that WA students are already provided with the right amount of math and English (47 percent) and college readiness (47 percent). Each of the items was analyzed for differences in response by respondent type and demographics. Significant differences were observed by respondent type for all items except Supporting Students in Pursuing Their Own Interests. Significant differences were observed by respondent demographics (gender, ethnicity and/or race) for all items. See Appendix F (Statistical Tables) for the statistical results of these items.

All stakeholder respondents were asked if they were responsible for hiring or supervising employees as part of their current job duties. This was a trigger question and “Yes” respondents are directed to a subsequent open response question. About one third of Educators, Parents/Guardians and Recent High School Graduates indicated they were responsible for hiring or supervising employees. Responses for this item were analyzed for differences by respondent type and demographics. Significant differences were observed for this item by respondent type, gender, and race, see Appendix F.

Figure 86. Stakeholder Survey: “Are you responsible for hiring or supervising employees as part of your current job duties?” By Respondent Type

Respondents that indicated they were responsible for hiring or supervising employees as part of their current job duties (n=283) were asked via an open response item to describe the skills they desired in today’s job seekers. Similar to responses received via Industry Stakeholder Interviews, the skills most

respondents indicated they wish today’s job seekers had more of included a good work ethic, problem-solving or critical thinking skills, and communication skills.

*“Work ethic, motivation, job readiness immediately leaving high school, if they choose not to attend college.” – Parent/Guardian*

*“Students need to be shown how to work, what employability looks like (early, no phone, use your time and resources wisely) and they need real experiences to help them find a passion to pursue in the future.” – Educator*

Respondents also commented that today’s entry level job seekers overall lack the experience and understanding of what needs to be done to apply for, interview, show up reliably and consistently, and “work hard”. Table 14 shows the range of themes expressed by respondents when asked to describe desired skills in jobseekers. Please note, individual responses may have covered more than one category.

*“Students don't have summer jobs or weekend jobs anymore so they graduate high school with zero idea of what it takes to be an employee.” – Educator*

*“Professionalism, basic skills such as banking, resume building, the importance of seeing a job through and remaining humble and open as a learner.” – Community Member*

Table 25. Stakeholder Survey Open-Ended Question (n=283): “In your own words, what skills do today's job seekers lack that you wish they had?”

Desired Skills in Job Seekers	Count	Percent
<b>Good work ethic and work etiquette</b>	63	18%
<b>Good problem solving or critical thinking skills</b>	48	14%
<b>Communication skills</b>	44	12%
<b>Take initiative / self-starter</b>	31	9%
<b>Interpersonal Skills</b>	24	7%
<b>Responsibility/reliability/dependability</b>	17	5%
<b>Ability to collaborate with others</b>	14	4%
<b>Respect for others in the workplace</b>	13	4%
<b>Basic life skills</b>	13	4%
<b>Accountability</b>	13	4%
<b>Financial literacy</b>	12	3%
<b>Experience</b>	12	3%
<b>Basic English and math skills</b>	12	3%
<b>Persistence/perseverance</b>	8	2%
<b>Adaptable to the changing work environment</b>	8	2%
<b>Self-sufficient / ability to complete tasks independently</b>	7	2%

Desired Skills in Job Seekers	Count	Percent
<b>Leadership skills</b>	6	2%
<b>Technical skills</b>	5	1%
<b>Decision making skills</b>	3	1%
<b>Ability to multi-task</b>	2	1%

## FOCUS GROUPS

Educators participating in online Focus Groups were asked to describe the relevance of the pathways in supporting students in their post high school plans. It was indicated that in general, the SBA pathway ends up being the default graduation pathway, regardless of whether or not it is in a student's High School and Beyond Plan, as all students are required to take the assessment whether or not it is their selected pathway. Only students that have difficulty passing the SBA are directed to select a different pathway option. Focus Group participants shared that this doesn't fulfill the true purpose, or potential, of graduation pathways options, nor does it support students in achieving post high school plans.

Focus Group participants indicated that pathway options involving a standardized assessment (SBA, SAT/ACT, AP, ASVAB) are not equitable for students with disabilities or students with high test anxiety. They express that even with accommodations, many students with IEPs have difficulty passing the assessments and that some of the assessments are not easily obtained or readily available. For example, even with accommodations, students with visual impairment still have difficulty on the math portion of these tests, and accommodations for tests like the ACT have to be requested in advance and generally the student has to pay out of pocket to access them (the current ACT test fee is \$196.50<sup>12</sup>). As well, the AP, SAT/ACT and ASVAB exams are not available in Spanish, which makes these options especially difficult for non-native English speakers. Other students may have difficulty passing either the math or ELA portion of the SBA, so they take another test like the ASVAB, even though they have no interest in the military, just so they can try to fulfill the graduation pathway option requirement.

*"We don't have any students that qualify for the WAIM so they all are doing the same grad pathway, which it seems like that's great for everything being equal. But it doesn't actually pan out that way. What I'm finding is that students that we've spent all this time teaching them to utilize tools and supports and resources, which is what we do as adults. beyond high school. Those tools and supports are not available as accommodations on the SBA. And so we aren't really seeing a true measure of how they can function and perform and demonstrate their understanding, as if they were able to use*

<sup>12</sup><https://global.act.org/content/global/en/products-and-services/the-act-non-us/registration/fees.html>

*those. So I think we need a way to do custom accommodations. It sounds really good to say everybody gets to use the same grad pathways, but don't meet the needs of all students." – Focus Group Participant*

The CTE pathway is the presumptive choice for students that have difficulty with standardized tests. Students selecting the CTE sequence pathway generally need to start as a freshman or sophomore to make the pathway viable and most students and parents don't understand that they will need to do that. Furthermore, not all school districts offer a CTE sequence that is within the students interest or in alignment with their post-secondary plans, which means that even if they are able to fulfill the requirement, the pathway is not meaningful to them and plans and goals beyond high school. Very small districts and ALE schools do not have the capacity for CTE classes, which leaves very few options for students needing a non-assessment pathway option.

*"I think that providing CTE pathways for students is super valuable and has made a huge difference to the students at our school. And that pathway fits for a lot of students and also enriches their experience. However if special education students are not interested in a CTE pathway, then a variety of different assessments besides the SBA require a lot of maneuvering to make those happen, especially in a school like ours, we're at a small school and we don't offer the ASVAB." – Focus Group Participant*

## INDUSTRY STAKEHOLDER INTERVIEWS

---

Similar to the responses from the Stakeholder Survey, the various businesses in Washington that were interviewed indicated that when hiring for entry level positions they looked for candidates with good communication, leadership and problem solving skills, as well as a good work ethic. Other skills and requirements referenced included CPR Certification (healthcare), timeliness, work safety protocols (trades), possessing a driver's license, and basic math skills (grocery).

*"Within the past two years, I've noticed people come to apply for a position lacking leadership skills and when asked how they would handle conflict resolution they don't seem to know how to navigate through that. Conflict resolution can be a big deal!" - HR Manager, Walsh Construction*

*"We look for soft skills like being able to make eye contact, hold a conversation, responsiveness to communication, willingness to show up to work and be on time. We train everyone for their position, but expect them to have these basic soft social skills at the very least." – CEO, Adrift Hospitality*

*"We look for people to hire that we think will be productive and reliable. We are looking for people with job or life experiences that show us that they know how to be productive, hardworking and consistent." – Owner, Mountain Shadow Nursery*

*"Customer service skills are important across all positions. The ability to interact with all levels of customers, emotional skills that allow them to deal*

*with happy people and angry people, and to solve problems. That is key to any job in our industry.” – Scheduling Manager, EverHome Healthcare*

With regards to skills that are necessary for success in the workplace, solid employability skills such as timeliness, reliability, accountability, productivity, and a willingness to learn were named as necessary attributes for entry level employees. Specifically, with regards to entry level employment, most businesses plan to provide on the job training, so a desire to learn the tasks that are important to doing the job, the drive to follow through and to complete tasks independently and consistently, is highly valued.

*“I wish [entry level applicants] were more reliable. Younger people are so used to managing their own schedules and doing what they want, that it’s hard for them to adjust to a structured working environment. I wish they understood the importance of reliability and had experience with this before they get to me.” – Head of Operations, Pane d’Amore*

*“We are looking for good communication skills, responsiveness to written communication (text messages and emails), and the ability to interface with technology. We use a pretty sophisticated payroll and scheduling system and we need employees to be able to use that system to create their work schedules. They should also understand how a paycheck and direct deposit works.” – CEO, Adrift Hospitality*

*“We are looking for go-getters, people that ask questions and are willing to learn as much as they can.” – Manager, Jay’s Farmstand*

*“There’s a complete lack of professionalism. The landscape has changed. Work savvy professionalism is just missing.” – VP of Recruiting, Pace Staffing Network*

Industry Stakeholder Interview participants also said that they wished that all potential applicants had some amount of work experience and were better prepared for the interview and hiring process in general. Comments indicated that potential applicants should have interview experience, a solid resume free of typos and spelling errors, look professional and have some relevant knowledge of the company or job they are interviewing for. Interviewees indicated that applicants lack basic experience in these areas and felt that this was something that should be learned in school well beyond ever applying for a job beyond high school. As well, even with entry-level positions, the employers expect that potential employees have some work experience and understand the basic principles of what it takes to hold down a job, including showing up for work on time, and how to access payroll, timesheets and direct deposit.

*“Have follow through and be ready. People show up asking if they are hiring and when asked to fill out an application they are not ready and don’t have resume ready to provide. Many never return with the application.” – Owner, Curfman Custom Fabrication*

*“Be responsive to any inquiry. Sometimes we call for an interview and they don’t answer the phone and they do not have voicemail available. We need to be able to leave a message. Do the research on a company in advance of the interview, know a little bit about the industry, ask questions.” – HR Manager, Inland Empire Paper*

*“It would benefit the High School graduates as well as the Certified graduates if schools would offer a preparation class for the hiring and interview process. Some people interview well, and others do not, but they can both become great employees.” – Scheduling Manager, EverHome Healthcare*

*“Nearly everyone needs help preparing for the job interview, especially resumes. We receive so many resumes that have simple mistakes (typos, etc.) and those people don’t get interviews. Work Prep 101 would be helpful, know how to create a legible resume and interview practice.” – Owner, Mountain Shadow Nursery*

When asked about the skills and knowledge interviewees thought today’s workforce lacks, many indicated good work ethic, common sense, reliability, work experience, initiative, and interpersonal skills. As well, some interviewees commented that some applicants tend to have a general sense of entitlement and have an inability to stay focused on the task at hand.

*“Well, I’m not sure how to say this, but the new entry level employee out of high school has an attitude of entitlement. They seem to think that they are doing you a favor!” – Owner, Farm Fresh Market*

*“There is a general lack of job experience amongst young people. I don’t want to be the one that has to teach someone how to come to work. I’d rather work with people that already know how to hold down a job, be consistent and productive.” – Owner, Mountain Shadow Nursery*

*“Openness to starting at the bottom and taking a few years to learn and grow with the company. A lot of people think that they should be promoted to managerial positions after 6 months and that is an unrealistic expectation.” – HR Manager, Janicki Industries*

*“Soft skills, basic foundational principals of being a successful worker. Communicating when you’re feeling anxious, willingness to receive and give constructive feedback and ask for help, versus quitting.” – Executive Director of Service Lines, Providence Healthcare*

*“Commitment, work ethic in general, young people come in here and they don’t want to work the days we need, or the hours we need, they don’t want to work weekends, they are very entitled and out of touch with the reality of what having a job takes. Not every job is a Monday through Friday and the*

*way our world is now, things are open 24 hours all the time.” – HR Field Specialist, Haggen Food & Pharmacy*

## CONCLUSION

In order to ensure sustainability of overarching goals and objectives of the project beyond the current timelines, it is important to understand lessons learned and how they might impact future work related to the Graduation Pathway Options. The following provides an overview of the lessons learned over the course of the three years and gives additional context to potential strategies for future graduation pathway options planning and development, as well as recommendations for general project development. Lessons learned are organized from the most relevant and recent year, YR3, to YR1 when the project started.

---

### LESSONS LEARNED YEAR 3

1. **District level staff were less likely to answer District Survey questions than they were in previous years.** This could have been due to the timing of the survey window, the repetition of the survey questions (required as part of each year of the project), or an unknown factor. However, additional work might include investigating why certain stakeholder groups don't engage or are harder to engage, to inform adjustments so as to more likely engage them at a future date and time if needed.
2. **Students should have pathway options that more accurately reflect Washington's Profile of a Graduate.** Specifically, pathway options need to provide more opportunities for students to cultivate personal growth and knowledge, solve problems, communicate effectively, sustain wellness, embrace differences/diversity and master life skills/self-agency. Satisfying the requirements of current graduation pathway options do not necessarily support the important goals of Profile of a Graduate.
3. **Graduation pathways need to include options that are meaningful for students regardless of their post high school goals and dreams.** Specifically, there is a great need for graduation pathway options that require opportunities to master the skills and attributes needed to succeed in the 21<sup>st</sup> job market, regardless of whether job attainment occurs immediately after high school or during/after post-secondary education. Future work in this area also ensures the graduation pathway options are more aligned with the Washington Profile of a Graduate's definition of the purpose of the diploma.
4. **Students should have pathway options that truly reflect their High School and Beyond Plan.** This requires that the High School and Beyond Plan be a meaningful instrument that informs the supports students receive in planning their coursework, satisfying the requirements of their chosen graduation pathway and ensuring they leave high school with the skills, knowledge and *experiences* they need to achieve their post-graduation goals, regardless of what those are.

5. **Data collected during all three years of the project strongly indicate the need for additional graduation pathway options, especially pathways that are not assessment based.** Specifically, graduation pathways should be added that positively impact both equity for districts/schools in their ability to offer all of the graduation pathway options, and increase the likelihood that *all* students have access to pathways that are meaningful and supportive of their post-graduation goals. Future work on the incorporation, design, and parameters of additional pathways is needed and should be informed by stakeholders such as educators, parents/caregivers, industry professionals, other content experts, and most especially students.
6. **Graduation pathway options and the parameters under which they are satisfied need to be more student driven and incorporate greater opportunities for mastery-based learning.** This provides students the opportunity to apply their learning in real world settings, and demonstrate skill attainment and academic mastery in ways that truly reflect their learning experiences, inspire them to be lifelong learners, and honor their post-graduation goals.
7. **There is a disconnect between the definition of the Profile of a Graduate, the implementation of the High School and Beyond Plan, desirable employability skills as defined by industry stakeholders, and the current Graduation Pathway Options.** Specifically, the current graduation pathway options do not align with the profile of a graduate, do not allow each and every student to engage in pathway options that accurately reflect their post-graduation goals, and for the most part do not provide direct learning opportunities for students to practice and master employability skills that are desired by industry.
8. **Communication is always at the forefront of implementing important concepts, requirements, and new initiatives.** Across the three years of the project, stakeholders indicated that gaining a better understanding of the graduation pathway options is crucial. Similarly, in YR3 the importance of sharing information regarding not just the graduation pathway options, but the Profile of a Graduate and the High School and Beyond Plan was made very evident. Getting buy-in requires that stakeholders understand these initiatives. It helps with implementation, advocacy, and agency.
9. **Stakeholders like being involved in the decision making process related to the graduation pathway options.** They especially want to know that their feedback and the associated data will be used to affect real change and that they will have access to the related results and findings. Many of the stakeholders who participated at some point over the three years of the project have indicated they would like to be included in future planning, work groups, or additional data collection.
10. **Logical next steps for continued research on the graduation pathway options, might include focusing on collecting data from students and recent graduates as a standalone sample.** These populations can be hard to engage when included as a part of a larger stakeholder sample and deserve the time and resources needed to create research instruments and protocols dedicated

to collecting data specific to these populations. Given that students were not included in the original RFP for the project and were added to ensure a complete sample was provided, more time should be spent focusing on collecting data from a diverse sample of students and post graduates only.

---

## LESSONS LEARNED YEAR 2

11. **There is continuing concern regarding the availability of pathway options that are meaningful and supportive of post high school plans for each and every student**, but especially those receiving special education services, English learners, students experiencing homelessness, and other marginalized student groups (YR2).
12. **There is a need to more formally define what the obtainment of a high school diploma means** in terms of the skills, wisdom, and experiences students should expect to leave high school with. The development of the Washington State Profile of a Graduate (under 2021 SSB 5249) will likely address this issue for YR3 of the project (YR2).
13. **Current graduation pathway options rely heavily on measuring skill attainment with standardized tests**, even though standardized assessments may be inequitable or produce unreliable results for some student groups (YR2).
14. **Graduation pathway options lack mastery-based or other learning opportunities** where students have the ability to demonstrate skill attainment and academic mastery in a variety of ways that accurately represent where students are on their learning path (YR2).
15. Washington educators care deeply about students and their success beyond high school. However, **there is a deeply ingrained stigma that a four year college education is the gold standard of post high school education goals** and anything else is seemingly less. It is possible that such thinking unconsciously influences how graduation pathway options are viewed and presented to students. In addition, this may have negative effects on how graduation pathway options are designed and implemented (YR2).
16. **Students, parents/caregivers and educators would prefer that employability and life skills are an integral part of high school education regardless of post-graduation goals**. Specifically, whether a student is four year college bound after high school or not, employability and life skills are desirable content areas and currently lack representation within the context of the graduation pathway options (YR2).
17. As we look forward to year three **project planning it is important to ensure that data needed to inform project instruments and protocols is provided as planned**, and if not, project timelines will need to be adjusted accordingly in order to accommodate delays so that project deliverables

are not rushed or compromised due to lack of time to successfully implement activities as planned (YR2).

18. While actual project activities and deliverables provided during years one and two have exceeded the scope of work in the original research plan, **it is important that stakeholders' expectations are framed by the original scope of work, associated deliverables, timelines and budgetary constraints** so that stakeholders can focus on the important questions and tasks needed to address the research questions and support future development of the graduation pathway options (YR2).
19. **Additional strategies are needed to engage a larger number of student and parent/caregiver stakeholders to ensure these important voices are heard** (YR2).
20. The majority of **stakeholders, across all groups, expressed their gratitude at being included in the feedback process**. This says a great deal about the potential for positive growth and awareness around the graduation pathway options and challenges us, as researchers, to assess how we are collecting data, the questions we are asking, and the ways in which we present findings so that we can engage stakeholders in future activities (YR2).

---

## LESSONS LEARNED YEAR 1

21. A critical lesson learned this year is **the need for further exploration of emerging themes, such as barriers to offering all pathways and ways to address perceived barriers**. As findings emerged indicating many of the key stakeholders felt uninformed regarding the new graduation pathway options, it became evident that it might be too early to collect significant data to address related research questions. Especially since pathways are being implemented for the first time this year, stakeholders likely need additional time to understand the nuances of the barriers they perceive and subsequently strategies to mitigate them (YR1).
22. It is also essential that **stakeholders at all levels are provided with the information, supports, and materials needed to fully understand the available pathways and how they can best be implemented**. This includes the ability of educator stakeholders to have easy access to information and materials they can share with their students and parents in a variety of formats that work best for their populations. Many of our significant findings from both quantitative and qualitative data strongly suggest that stakeholders began the process of implementing the new graduation pathways without having access to the information necessary to implement them with confidence (YR1).
23. There is also a need to **more formally define the intent of the graduation pathway options so that there is a consistent framework for thoughtfully addressing potential changes, including the**

**removal or addition of pathway options.** This will be important to inform the development of instruments and protocols to address research questions in year two, and also to contextualize feedback from key stakeholders. Specifically, because we are seeking to answer questions related to what additional pathways are needed or what changes need to be made to existing pathways, it is important to define, as precisely as possible, what exactly the pathways “should” be doing. This gives stakeholders better context for responding to our inquiries and allows us to collect data that is more attuned to our research questions in years two and three (i.e., general questions in year one are useful to cast as wide a net as possible for potential themes, etc. but can potentially be less useful in subsequent years) (YR1).

24. **Equitable access to graduation pathway options, especially for systemically marginalized student populations, is incredibly important to all stakeholder groups and should be an essential part of research in future years.** This is an extremely important lesson because it illuminates where work needs to occur, both in potential changes to the pathways and also in terms of addressing our research questions. Good research should, in a way, produce more questions and this critical area of need identified by stakeholders will likely shape much of the graduation pathway evolution in years to come (YR1).
25. Given that the intent of the project is to examine the perceptions of key stakeholders and gather valid data in relation to the graduation pathway options, it is not surprising that **the demands of all graduation requirements expected of students, including the 24 credits, is intertwined with the graduation pathway options and how those are perceived by stakeholders.** It would be remiss to expect the graduation pathway options to exist independently of these other graduation requirements. A guiding question for our remaining work, is how can we stay focused on the task to collect data specific to our research questions, while also incorporating additional, but related areas for exploration, such as the impact, or lack thereof, of the 24-credit requirement on the graduation pathway options (YR1)?
26. In observing the progression of information provided by stakeholders throughout the course of the community forum observations, survey administrations, and especially during the focus groups, it is evident that **the majority of any perceived resistance to the new graduation pathways is more indicative of the unknown, general resistance to change and lack of understanding, rather than true negative experiences on the part of the stakeholders.** This is a crucial lesson, because it helps us understand how to craft future data collection opportunities in ways that are meaningful and create positive experiences for stakeholders to share feedback, provide input, and most of all feel invested in the graduation pathway options (YR1).
27. Similar to the previous lesson learned, **the majority of stakeholders, across all groups, were very willing and grateful to be included in the feedback process.** This says a great deal about the potential for positive growth and awareness around the graduation pathway options. It challenges us, as researchers, to assess how we are collecting data, the questions we are asking,

and the ways in which we present findings so that we can keep stakeholders' interest and desire to be a part of future activities (YR1).

28. As we look forward to years two and three and begin project planning for the future, **it will be important to ensure there's more time for the SBE to review and respond to project documents, instruments, and protocols and that Strobel Consulting has more time to incorporate suggested edits in a way that is helpful for both parties.** Such lessons are easy to incorporate into future task timelines and can only improve overall results and deliverables. As well, given a greater understanding of the complexity of board meeting logistics, it will be effortless to work the appropriate timelines into the production of deliverables needed for board meetings, so as to ensure there is plenty of time to submit two weeks in advance of scheduled meetings.
29. Additionally, while the original research plan included conducting focus groups prior to the Stakeholder Survey in order to inform subsequent question development, due to time constraints and challenges securing and coordinating with hosts sites, we ultimately opted to host focus groups after the majority of data from the Stakeholder Survey was collected. On one hand, this allowed us to use the focus groups to clarify gaps in quantitative and qualitative data collected via the survey, however we believe **the project and subsequent research will be better served by ensuring focus groups are hosted prior to the main survey for each year** to ensure that the survey is as fine-tuned and effective as possible. Knowing what we know now about coordinating with focus group sites, it will be very straightforward to guarantee this occurs (YR1).
30. **Additional efforts are needed to broaden community outreach in order to ensure we get as diverse a respondent sample as possible.** Especially since there is a high percentage of respondents who decline to answer many of the questions that allow us to accurately track demographic diversity (YR1).

# SUMMARY OF APPENDICES

The following appendices A-F accompanies the Stakeholder Feedback Project Year 3, Volume I report. This Volume II contains the full District Follow Up Survey, Stakeholder Survey, Focus Group Protocol, Industry Interview Protocol, the full response frequency distribution for multiple choice survey items, and the statistical tables for all chi-square analyses performed.

## APPENDIX A: DISTRICT FOLLOW UP SURVEY

### WA GRADUATION PATHWAY OPTIONS DISTRICT SURVEY 2022

School level and district personnel completed the following online District Survey between June 1 and July 1, 2022. The survey, created by Strobel Consulting was developed to measure:

- ◆ Whether changes to the existing graduation pathways should be made and what those changes should be.
- ◆ The barriers school districts have to offering all of the graduation pathways and potential strategies to eliminate or reduce those barriers.
- ◆ Whether all students have equitable access to all of the graduation pathways and, if not, potential strategies to reduce the barriers students may have to accessing all of the graduation pathways.
- ◆ Whether additional graduation pathways should be included and ideas on what those pathways should be.
- ◆ Interest in focus group participation; and
- ◆ Demographic information.

### INTRODUCTION

### Washington Graduation Pathway Options - District Survey

Thank you for your willingness to provide feedback on Washington's graduation pathway options. This survey is intended for school and district personnel, especially in districts that are not currently offering all the graduation pathway options. You will not be required to provide your name or any identifying information on this survey, and all responses will be reported anonymously or in aggregate form. You may exit this survey at any time by selecting "Exit Survey" at the top right of each page. This survey will close Friday, July 1, at 5 PM PST.

If you have any questions regarding this survey, please email Danielle DuBose at [danielle@strobel-consulting.com](mailto:danielle@strobel-consulting.com) or call 307-654-0202.

### New Graduation Requirements

# WA Graduation Pathway Options – Stakeholder Feedback Project

In 2019, the Washington State Legislature provided students with multiple pathways to high school graduation by passing House Bill 1599. The pathways are intended to be tailored to the student's goals and allow the student to demonstrate college and career readiness.

## The Graduation Pathway Options

Beginning with the Class of 2020, students must complete at least one of the following pathway options to graduate:

- 1) Meet the graduation scores on the Washington State Assessments in English language arts (English) and mathematics or in WA-AIM (Washington Access to Instruction & Measurement).
- 2) Earn at least one high school credit in English and one credit in math through a Running Start, College in the High School, or Career and Technical Education Dual Credit course.
- 3) For both English and math, earn specific scores on certain Advanced Placement exams, International Baccalaureate exams or Cambridge International exams, or pass the course with at least a C+.
- 4) Meet the graduation scores in the math and English portions of the SAT or ACT.
- 5) Pass a transition course in English and math (for example, a Bridge to College course) which allows a student to place directly into a credit-bearing college level course.
- 6) Meet any combination of at least one English and one math option of those options listed previously.
- 7) Meet the graduation score on the ASVAB (Armed Services Vocational Aptitude Battery)
- 8) Complete an approved sequence of Career and Technical Education (CTE) courses

Your responses to this survey will help inform future graduation pathway development. Thank you for being an important part of this process!

1) Which of the following best describes you?\*

District Administrator or Other District Personnel

High School Administrator, Teacher or Other High School Personnel

**Page entry logic:** This page will show when: #1 Question "Which of the following best describes you?" is one of the following answers ("District Administrator or Other District Personnel")

## DISTRICT PERSONNEL SURVEY

## DEMOGRAPHICS

The following questions ask about different demographics. Demographic questions allow researchers to gain meaningful background information and provide context for the collected survey data by helping to describe participants. Demographic data also make it possible to look at data in different ways and are important for understanding concepts like the equity of the graduation pathway options and the diversity of survey respondents.

THANK YOU!

Thank you for sharing your feedback regarding the graduation pathways.  
Your response is meaningful and important!

In addition, we are also collecting data regarding the Profile of a Graduate and the Pathways related to opportunities for applied learning and post high school success. If you would like to complete this survey please click [here](#) or copy and paste the following link in your browser.

# WA Graduation Pathway Options – Stakeholder Feedback Project

<https://survey.alchemer.com/s3/6804775/WA-Graduation-Pathway-Options-Stakeholder-Survey-2022>

For More information on high school graduation, please see the Washington State Board of Education's [Graduation Requirements](#) and [Graduation Pathway Options](#) webpages.

## APPENDIX B: STAKEHOLDER SURVEY

### WA GRADUATION PATHWAY OPTIONS STAKEHOLDER SURVEY 2022

Educators, parents/caregivers, community members, recent high school grads and current high school students completed the following online Stakeholder Survey between June 1 2022 and July 1, 2022. The survey, created by Strobel Consulting, was available in both English and Spanish and was developed to measure:

- ◆ What additional graduation pathways should be added to the existing graduation pathways.
- ◆ Whether modifications should be made to any of the existing pathways.
- ◆ How the High School and Beyond Plan is/was implemented in their school or district.
- ◆ What improvements could be made to the High School and Beyond Plan to make it a better tool for students to plan their future after high school
- ◆ What improvements could be made to the High School and Beyond Plan to make it a better tool for students to make decisions about courses, graduation pathway options, other academic and career learning activities.
- ◆ Relevancy of pathways, and how to make them more relevant.
- ◆ Alignment of pathways to Profile of a Graduate
- ◆ Demographic information.

### INTRODUCTION

## Washington Graduation Pathway Options - Stakeholder Survey

Thank you for your willingness to provide feedback on Washington's new Graduation Pathway options. This survey is intended for students, parents, educators, and community members. You will not be required to provide your name or any identifying information on this survey, and all responses will be reported anonymously or in aggregate form. You may exit this survey at any time by selecting "Exit Survey" at the top right of each page. This survey will close July 1st at 5 PM PST.

If you have any questions regarding this survey, please email Danielle DuBose at [danielle@strobel-consulting.com](mailto:danielle@strobel-consulting.com) or call 307-654-0202.

New Graduation Requirements

# WA Graduation Pathway Options – Stakeholder Feedback Project

In 2019, the Washington State Legislature provided students with multiple pathways to high school graduation by passing House Bill 1599. The pathways are intended to be tailored to the student's goals and allow the student to demonstrate college and career readiness.

## The Graduation Pathway Options

Beginning with the Class of 2020, students must complete at least one of the following pathway options to graduate:

- 1) Meet the graduation scores on the Washington State Assessments in English language arts (English) and mathematics or in WA-AIM (Washington Access to Instruction & Measurement).
- 2) Earn at least one high school credit in English and one credit in math through a Running Start, College in the High School, or Career and Technical Education Dual Credit course.
- 3) For both English and math, earn specific scores on certain Advanced Placement exams, International Baccalaureate exams or Cambridge International exams, or pass the course with at least a C+.
- 4) Meet the graduation scores in the math and English portions of the SAT or ACT.
- 5) Pass a transition course in English and math (for example, a Bridge to College course) which allows a student to place directly into a credit-bearing college level course.
- 6) Meet any combination of at least one English and one math option of those options listed previously.
- 7) Meet the graduation score on the ASVAB (Armed Services Vocational Aptitude Battery)
- 8) Complete an approved sequence of Career and Technical Education (CTE) courses

Your responses to this survey will help inform future graduation pathway development. Thank you for being an important part of this process!

1) Which of the following best describes you?\*

- High School Student
- Recent High School Graduate (Class of 2019, 2020 or 2021)
- Parent or Guardian
- Community Member
- Educator

**Show/hide trigger question.**

2) Are you responsible for hiring or supervising employees as part of your current job duties?\*

---

## DEMOGRAPHICS

The following questions ask about different demographics. Demographic questions allow researchers to gain meaningful background information and provide context for the collected survey data by helping to describe participants. Demographic data also makes it possible to look at data in different ways and is important for understanding concepts like the equity of the graduation pathway options and the diversity of survey respondents.

25) I identify my gender as:

## THANK YOU!

Thank you for sharing your feedback regarding the graduation pathways.  
Your response is meaningful and important!

For More information on high school graduation, please see the Washington State Board of Education's [Graduation Requirements](#) and [Graduation Pathway Options](#) webpages.

## APPENDIX C: FOCUS GROUP PROTOCOL

### WA SBE HIGHSCHOOL GRADUATION PATHWAY OPTIONS

#### YR3 FOCUS GROUP PROTOCOLS

#### Focus Group Summary

**Structure:** 4-7 participants, 60 minutes

**Participants:** District, School, Parent, and Student Stakeholders

#### GENERAL PROBES:

- What do others think about...?
- I'd like to hear a little more about...
- Does anyone else have anything to add?
- Has anyone had a different experience?
- Can you give me an example?
- I want to make sure I understand, can you clarify?

---

#### *Focus Group Protocol*

**All Groups Welcome:** Welcome to the WA State Board of Education's focus group regarding the graduation pathway options. We appreciate your willingness to be a focus group participant and share your perspective on details surrounding the new pathways. My name is Alisha Strobel and I'm the president of Strobel Consulting. We were hired by the State Board to oversee the collection of data from various stakeholders, over three years, regarding the graduation pathway options. This is year three of the project.

As you many of you know, in 2019, the Washington State Legislature provided students with multiple pathways to earning a high school diploma by passing House Bill 1599. Completing a graduation pathway is intended to help prepare students for life after high school graduation. The pathways also let future employers and postsecondary education providers know students are ready for their next step towards a career or additional learning. In an effort to gain feedback from key stakeholders regarding these new graduation pathway options, my company, was contracted to conduct surveys and focus groups on behalf of the WA State Board of Education to help inform future graduation pathway development. The focus group questions we'll be discussing today are not intended to cover all the information collected on the Stakeholder Survey for year 3. Rather, the questions I will be asking today are intended to help us dig a little deeper into specific themes and feedback collected during years one and two of the project and from additional data gathered so far this year.

Before we get started, I wanted to let you know that today's session will be recorded, as I can't always write fast enough to keep up with the discussion. That being said, data gathered from these focus groups will be reported in summary form and any quotes used from the sessions will be shared anonymously. Please raise your hand to indicate your agreement with the meeting being recorded. If you prefer not to participate in a recorded session, we understand, and you may exit the Zoom meeting now. To keep background noise to a minimum please keep your microphone if you are not actively sharing.

Are there any questions before we begin?

## Questions - Adult Focus Group:

- 1) Let's begin with a quick round of introductions. Please tell me 1) your first name, 2) your role in education or the community, and 3) in a few sentences the reason you wanted to participate in this focus group. Who would like to go first?

Follow Up – For the purpose of today's focus group I want to talk about the graduation pathways and how they relate to the Profile of a Graduate and the High School and Beyond Plan. These are defined by the state as follows:

- a. "Profile of a Graduate" -- a guiding vision for our K-12 education system, developed with local input, that identifies the skills, knowledge, attributes, and competencies necessary for a successful transition to life after high school.
  - b. The High School and Beyond Plan may provide students with the opportunity to explore their own skills and interests and discover potential career and educational options. This personalized plan helps to connect career interests with courses and courses with career pathways or college majors. The plan helps students identify the steps needed to reach postsecondary goals.
- 2) Do the current graduation pathway options support the Profile of a Graduate, why or why not?
  - 3) Do you think that the High School and Beyond Plan is a useful tool for students to plan their future after high school, why or why not?
  - 4) Do the existing graduation pathway options help support students' in achieving their post high school plans?
  - 5) What changes could be to help make the High School and Beyond Plan a more valuable tool for students?
  - 6) How would you like to see the High School and Beyond Plan implemented to support graduation pathway options?

**Adult Closing:** Thank you so much for taking the time to be a part of this focus group. Your feedback is very valuable. If, as you digest the discussion that occurred, you think of other feedback you'd like to share please don't hesitate to call or email me.

Lastly, if you have additional thoughts you'd like to share, regarding the graduation pathway options, please feel free to share them now. Otherwise, have a wonderful day/evening and thank you again for participating in this focus group.

## Questions – Student Focus Group:

- 1) Let's begin with a quick round of introductions. Please tell me 1) your first name, 2) something that you plan to do this summer, and 3) in a few sentences the number one reason you wanted to participate in this focus group. Who would like to go first?
- 2) Now, I would like you to take a minute to think about what you would like to do after high school. This can include anything and everything you would like to do once you leave high school. It could include going on a trip, having a garden, getting more education, or the type of job you would like to have. Who would like to share one of the things they'd like to do after they leave high school?
- 3) Do you have a high school and beyond plan that is helping you, or has helped you, prepare to do the things you want to do after high school?
- 4) What skills, knowledge, attributes, do you think you will need to successfully transition to life after high school?
- 5) What would help you to be better prepared to do the things you want to after you leave high school?

**Student Closing:** Thank you so much for taking the time to be a part of this focus group. Your feedback is especially valuable to the work we are doing! I hope you have a wonderful day.

## APPENDIX D: INTERVIEW PROTOCOL

### WA SBE HIGHSCHOOL GRADUATION PATHWAY OPTIONS

#### YR3 INTERVIEW PROTOCOLS

#### Introduction:

Thank you for taking the time to talk to you today. As I indicated in my email, I'm Alisha Strobel, the president of Strobel Consulting and we are working with the Washington State Board of Education collecting feedback and data on their new graduation pathway options from key stakeholders. We were contracted to conduct surveys, focus groups, and these interviews on behalf of the WA State Board of Education to help inform future graduation pathway development.

To give you a little background, in 2019, the Washington State Legislature provided students with multiple pathways to earning a high school diploma by passing House Bill 1599. Completing a graduation pathway is intended to help prepare students for life after high school graduation. The pathways also let future employers and postsecondary education providers know students are ready for their next step towards a career or additional learning.

Before we get started, I wanted to check with you to see if it would be okay to record your interview, as I can't always write fast enough to keep up with the discussion? Also, feedback gathered from interviews will be reported in summary form and any quotes will be shared anonymously.

Do you any questions for me before we dive into the interview questions?

#### Questions:

- 1) Do you hire entry level employees?
  - a. If Yes: What skills and knowledge are most important to you when hiring for entry level positions?
  - b. If No: Skip to next question.
- 2) What skills or knowledge do you wish your new hires had more of when starting with your company or business?
- 3) What is your biggest challenge in finding candidates you want to hire for your open positions?
- 4) What skills or knowledge do you think today's workforce lacks?
- 5) How can future employees be better prepared to be successful during the hiring and interview process?

**Closing:** Thank you so much for taking the time to share your feedback with me. I know your time is valuable and I appreciate you being willing to do this! If you think of other feedback you'd like to share, please don't hesitate to call, or email me.

# APPENDIX E: FULL RESPONSE DISTRIBUTION

## DISTRICT SURVEY

Table E1. Frequency results for questions answered by district personnel and high school personnel:

	Yes	No	Unsure	N
Changes need to be made to the existing graduation pathway options.	48%	36%	16%	25
Additional graduation pathway options should be added.	44%	32%	24%	25

	Strongly Disagree	Disagree	Undecided	Agree	Strongly agree	Not familiar enough with the Profile of a Graduate	N
The graduation pathway options my district currently offers align to Washington's Profile of a Graduate.	0%	12%	20%	52%	12%	4%	25
All students in my district have equitable access to all of the graduation pathways available in the district.	24%	20%	8%	24%	24%	N/A	25

## STAKEHOLDER SURVEY

Embraces Differences/Diversity: Participates in community, promotes global responsibility, shows cultural competency.	11.8%	15.2%	28.8%	28.8%	15.4%	868
Masters Life Skills/Self-agency: Takes initiative, understands financial and digital literacy, accesses resources.	7.4%	12.7%	29.8%	36.6%	13.5%	868

## APPENDIX F: STATISTICAL TABLES

A Chi-Square statistic, commonly used for testing relationships between categorical variables, was used to evaluate the relationship between the survey responses and the respondents demographic characteristics. The chi-square assesses whether an association exists between the two variables by comparing the observed pattern of responses in the cells to the pattern that would be expected if the variables were truly independent of each other. If the p-value is less than .05 we can conclude that the variables are not independent of each other and that there is a statistical relationship between the categorical variables. All analyses were evaluated at the  $\alpha = .05$  level, indicating a 5 percent chance of committing a Type I error. Specifically, a Type I error is claiming one of the differences below to be “statistically significant,” when in fact it is not. A standardized residual (S.R.) was also included for each cell. This is a diagnostic element of chi-square testing used to indicate cells that are influential toward the overall test result. Standardized residuals greater than  $|2.0|$  are significantly different from expected values and therefore should be investigated for their relative contribution toward findings. *Post hoc* procedures were not performed due to the nature of the tests.

Table F1. Chi-square test results for questions comparing Stakeholder Survey respondent types:

Are you familiar with the current high school graduation pathway options available in the state of Washington?										
	Yes			No			Unsure			N

## WA Graduation Pathway Options – Stakeholder Feedback Project

How well does the current diploma and each of its three components fulfill the following purpose? According to the statute: "The purpose of a high school diploma is to declare that a student is ready for success in postsecondary education, gainful employment, and citizenship, and is equipped with the skills to be a lifelong learner."...Graduation Pathway Options
