WAC 173-186-360  Planning standards for air monitoring to protect oil spill responders and the public. Rail contingency plans shall include a narrative description of applicable federal, state, and local requirements and the plan holder's resources for conducting air monitoring to protect oil spill responders and the public, including:

1. A description of how initial site characterization for responders will occur;
2. A description of air monitoring instruments and detection limits that will be used when monitoring for public safety;
3. A description of action levels for various oil constituents of concern based on products handled by the railroad (benzene, H2S, etc.);
4. A description of how data management protocols and reporting time frames will be managed under unified command;
5. A description of how communication methods to at-risk populations will be managed under unified command;
6. A description of how evacuation zones and shelter-in-place criteria are established under unified command.

[Statutory Authority: RCW 90.56.210. WSR 16-18-052 (Order 15-14), § 173-186-360, filed 8/31/16, effective 10/1/16.]
