WAC 296-155-17303 Definitions. For the purpose of this standard, the following definitions apply:

**Action level.** A concentration of airborne MDA of 5 ppb as an 8-hour time-weighted average.

**Authorized person.** Any person specifically authorized by the employer whose duties require the person to enter a regulated area, or any person entering such an area as a designated representative of employees for the purpose of exercising the right to observe monitoring and measuring procedures under WAC 296-155-17333, or any other person authorized by the act or regulations issued under the act.

**Container.** Any barrel, bottle, can, cylinder, drum, reaction vessel, storage tank, commercial packaging, or the like, but does not include piping systems.

**Decontamination area.** An area outside of, but as near as practical to, the regulated area, consisting of an equipment storage area, wash area, and clean change area, which is used for the decontamination of workers, materials, and equipment contaminated with MDA.

**Dermal exposure to MDA.** Occurs where employees are engaged in the handling, application, or use of mixtures or materials containing MDA, with any of the following nonairborne forms of MDA:

(a) Liquid, powdered, granular, or flaked mixtures containing MDA in concentrations greater than 0.1% by weight or volume; and

(b) Materials other than "finished articles" containing MDA in concentrations greater than 0.1% by weight or volume.

**Director.** The director of the department of labor and industries.

**Emergency.** Any occurrence such as, but not limited to, equipment failure, rupture of containers, or failure of control equipment which results in an unexpected and potentially hazardous release of MDA.

**Employee exposure.** Exposure to MDA which would occur if the employee were not using respirators or protective work clothing and equipment.

**Finished article containing MDA.** A manufactured item:

(a) Which is formed to a specific shape or design during manufacture;

(b) Which has end use function(s) dependent in whole or part upon its shape or design during end use; and

(c) Where applicable, is an item which is fully cured by virtue of having been subjected to the conditions (temperature, time) necessary to complete the desired chemical reaction.

**Historical monitoring data.** Monitoring data for construction jobs that meet the following conditions:

(a) The data upon which judgments are based are scientifically sound and were collected using methods that are sufficiently accurate and precise;

(b) The processes and work practices that were in use when the historical monitoring data were obtained are essentially the same as those to be used during the job for which initial monitoring will not be performed;

(c) The characteristics of the MDA-containing material being handled when the historical monitoring data were obtained are the same as those on the job for which initial monitoring will not be performed;

(d) Environmental conditions prevailing when the historical monitoring data were obtained are the same as those on the job for which initial monitoring will not be performed; and

(e) Other data relevant to the operations, materials, processing, or employee exposures covered by the exception are substantially similar. The data must be scientifically sound, the characteristics of the
MDA containing material must be similar, and the environmental condi-
tions comparable.

4,4' methylenedianiline or MDA. The chemical 4,4'-diaminodiphe-
nylmethane, Chemical Abstract Service Registry Number 101-77-9, in the
form of a vapor, liquid, or solid. The definition also includes the
salts of MDA.

Regulated areas. Areas where airborne concentrations of MDA ex-
ceed or can reasonably be expected to exceed, the permissible exposure
limits, or where "dermal exposure to MDA" can occur.

STEL. Short-term exposure limit as determined by any 15-minute
sample period.
